

PRESSURE INDICATOR

The function of the Pressure Indicator is to provide visual indication in the event of a rupture disc burst. If the disc has ruptured, the pressure relief valve will have discharged and must be replaced. (refer to Sentry safety device information).

Applications

The G15 Pressure Indicator is intended to be used as part of the Henry Sentry safety device assembly.

The unit is suitable for use with HCFC, HFC and ammonia refrigerants, along with their associated oils.

Main features

- Easy to read large indicator dial
- Stainless steel movement

Technical Specification

Allowable operating pressure = 0 to 41.4 barg

Allowable operating temperature = -40°C to + 65°C

Materials of Construction

Stainless steel case and movement.

Plexiglas dial window.
