(3) Remote control

(a) Wireless remote control

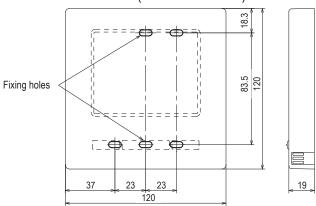

(b) Wired remote control (Option parts)

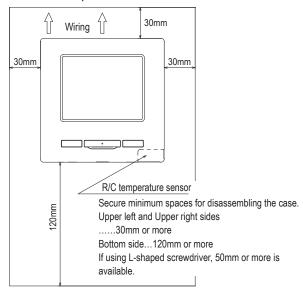

Interface kit (SC-BIKN-E, SC-BIKN2-E) is required to use the wired remote control. When RC-EX3A is connected, please use SC-BIKN2-E by all means.

Model RC-EX3A

Dimensions (Viewed from front)

Installation space

• Do not install the remote control at following places.

- 1) It could cause break-down or deformation of remote control.
 - · Where it is exposed to direct sunlight
 - Where the ambient temperature becomes 0 °C or below, or 40 °C or above
 - · Where the surface is not flat
 - · Where the strength of installation area is insufficient
- ② Moisture may be attached to internal parts of the remote control, resulting in a display failure.
 - · Place with high humidity where condensation occurs on the remote control
 - · Where the remote control gets wet
- ③ Accurate room temperature may not be detected using the temperature sensor of the remote control.
 - · Where the average room temperature cannot be detected
 - · Place near the equipment to generate heat
 - · Place affected by outside air in opening/closing the door
 - · Place exposed to direct sunlight or wind from air-conditioner
 - · Where the difference between wall and room temperature is large
- When you are using the automatic grille up and down panel in the IU, you may not be able to confirm the up and down motion.
 - · Where the IU cannot be visually confirmed

When installing the unit at a hospital, telecommunication facility, etc., take measures to suppress electric noises.

It could cause malfunction or break-down due to hazardous effects on the inverter, private power generator, high frequency medical equipment, radio communication equipment, etc.

The influences transmitted from the remote control to medical or communication equipment could disrupt medical activities, video broadcasting or cause noise interference.

R/C cable:0.3mm²x 2 cores

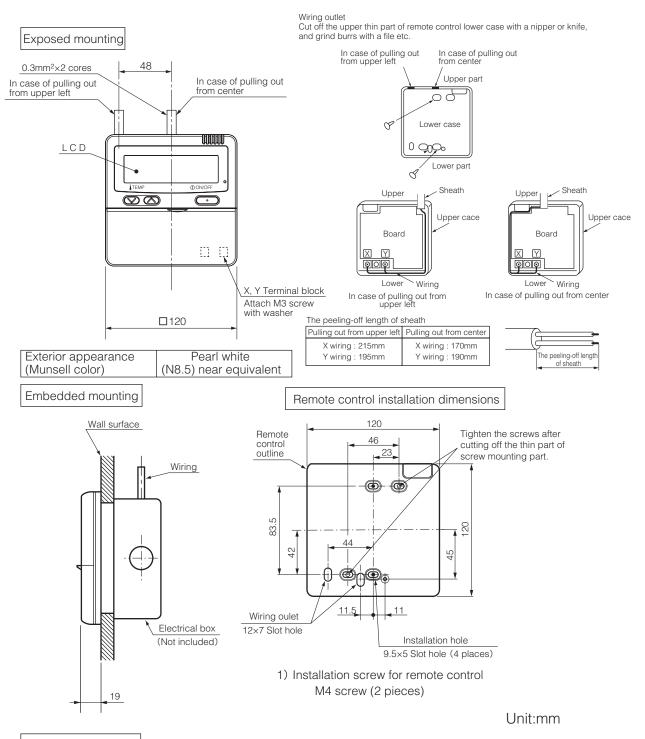

When the cable length is longer than 100 m, the max size for wires used in the R/C case is $0.5~\text{mm}^2$. Connect them to wires of larger size near the outside of R/C. When wires are connected, take measures to prevent water, etc. from entering inside.

≦ 200 m	0.5 mm ² x 2 cores
≦ 300m	0.75 mm ² x 2 cores
≤ 400m	1.25 mm ² x 2 cores
≤ 600m	2.0 mm ² x 2 cores

Adapted RoHS directive

PJZ000Z333

Model RC-E5

Wiring specifications

If the prolongation is over 100m, change to the size below.
 But, wiring in the remote control case should be under 0.5mm². Change the wire size outside of the case according to wire connecting. Waterproof treatment is necessary at the wire connecting section. Be careful about contact failure.

Length	Wiring thickness
100 to 200m	0.5mm ² ×2 cores
Under 300m	0.75mm ² ×2 cores
Under 400m	1.25mm ² ×2 cores
Under 600m	2.0mm ² ×2 cores

6. RANGE OF USAGE & LIMITATIONS

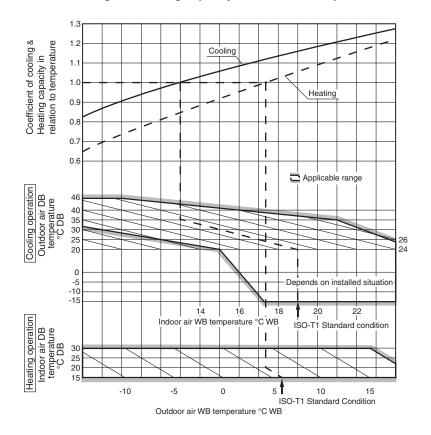

Model	SRK63ZR-W,71ZR-W,80ZR-W
Indoor return air temperature (Upper, lower limits)	Cooling operation : Approximately 18 to 32°C DB Heating operation : Approximately 15 to 30°C DB (Refer to the selection chart)
Outdoor air temperature (Upper, lower limits)	Cooling operation : Approximately -15 to 46°C DB Heating operation : Approximately -15 to 24°C DB (Refer to the selection chart)
Refrigerant line (one way) length	Max. 30m
Vertical height difference between outdoor unit and indoor unit	Max. 20m (Outdoor unit is higher) Max. 20m (Outdoor unit is lower)
Power source voltage	Rating ±10%
Voltage at starting	Min. 85% of rating
Frequency of ON-OFF cycle	Max. 7 times/h (Inching prevention 5-9 minutes)
ON and OFF interval	Min. 3 minutes

Selection chart

Correct the cooling and heating capacity in accordance with the conditions as follows. The net cooling and heating capacity can be obtained in the following way.

Net capacity = Capacity shown on specification \times Correction factors as follows.

(1) Coefficient of cooling and heating capacity in relation to temperatures

(2) Correction of cooling and heating capacity in relation to one way length of refrigerant piping

It is necessary to correct the cooling and heating capacity in relation to the one way piping length between the indoor and outdoor units.

Piping length [m]	7	10	15	20	25	30
Cooling	1.0	0.99	0.975	0.965	0.95	0.935
Heating	1.0	1.0	1.0	1.0	1.0	1.0

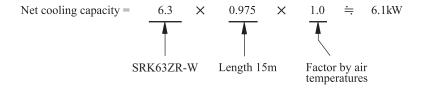

(3) Correction relative to frosting on outdoor heat exchanger during heating

In additions to the foregoing corrections (1), (2) the heating capacity needs to be adjusted also with respect to the frosting on the outdoor heat exchanger.

Air inlet temperature of outdoor unit in °CWB	-15	-10	-9	-7	-5	-3	-1	1	3	5 or more
Adjustment coefficient	0.95	0.95	0.94	0.93	0.91	0.88	0.86	0.87	0.92	1.00

How to obtain the cooling and heating capacity

Example : The net cooling capacity of the model SRK63ZR-W with the piping length of 15m, indoor wet-bulb temperature at 19.0° C and outdoor dry-bulb temperature 35° C is

	20	11.45	11.35	11.30	11.17	11.08					
Notes(1) T	hese data sho	w average	etatuese								

Notes(1) These data show average statuses.

Depending on the system control, there may be ranges where the operation is not conducted continuously.

These data show the case where the operation frequency of a compressor is fixed.

(2) Capacities are based on the following conditions.

Corresponding refrigerant piping length:7m

Level difference of Zero.

(3) Symbols are as follows.

TC: Total cooling capacity (kW)

SHC: Sensible heat capacity (kW)

HC: Heating capacity (kW)

ISC18127

8. APPLICATION DATA

(1) Installation of indoor unit

RLD012A018

Model SRK63,71,80,100ZR R32/R410A REFRIGERANT USED

- This installation manual deals with an indoor unit installation only. For an outdoor unit installation, refer to page 30.
- This unit is designed for R32 or R410A. See a label on the outdoor unit to check refrigerant information

SAFETY PRECAUTIONS

- Before installation, read the "SAFETY PRECAUTIONS" carefully and strictly follow it during the installation work in order to protect yourself.
 The precautionary items mentioned below are distinguished into two levels, (AWARNING) and (ACAUTION)
 Be sure to confirm no operation problem on the equipment after completing the installation. If unusual noise can be heard during the test run, consult the dealer.
 Be sure to explain the operating methods as well as the maintenance methods of this equipment to the
- AWARNING Indicates a potentially hazardous situation which, if not avoided, can result in serious congequences such as death or severe injuny.

 ACAUTION Indicates a potentially hazardous situation which, if not avoided, can result in personal indicates a potentially hazardous situation which, if not avoided, can result in personal indicates a potentially hazardous situation which, if not avoided, can result in personal indicates a potentially hazardous situation which, if not avoided, can result in personal indicates a potentially hazardous situation which, if not avoided, can result in serious constitution in serious constitution in the user's manual. Be sure to keep the installation manual together with user's manual at a place where it is easily accessible to the user and the user's manual.

jury or property damage.

Both mention the important items to protect your health and safety. Therefore, strictly follow them by any means.

♠ WARNING

Be sure to use only for residential purpose.

If this unit is installed in inferior environment such as machine shop, vehicle (like ship), warehouse, etc., it can malfunction.

Installation must be carried out by the qualified installer completely in accordance with the installation manual.

Installation by non qualified person or incorrect installation can cause serious troubles such as water leak, electric shock, fire and personal injury.

- leak, electric shock, fire and personal injury.

 Be sure to wear protective goggles and gloves while performing installation work. Improper safety measures can result in personal injury.

 Use the original accessories and the specified components for the installation. Using parts other than those prescribed may cause water leak, electric shock, fire and personal injury.

 Do not install the unit near the location where leakage of flammable gases can occur. If leaked gases accumulate around the unit, it can cause fire resulting in property damage and personal injury.
- sonal injury. When installing the unit in small rooms, make sure that refrigerant density does not exceed the limit (Reference: ISO5149) in the event of leakage. If refrigerant density exceeds the limit, consult the dealer and install the ventilation system. Otherwise lack of oxygen can occur resulting in serious accident. Install the unit in a location where unit will remain stable, horizontal and free

- of any vibration transmission.

 Unsuitable installation location can cause the unit to fall resulting in material damage and personal injury.

 Do not run the unit with removed panels or protections.

 Touching rotating equipments, hot surfaces or high voltage parts can cause personal injury due to entrapment, burn or electric shock.
- This unit is designed specifically for R32 or R410A
 Using any other refrigerant can cause unit failure and personal inju
 Do not vent R32 or R410A into atmosphere.

- R32 is a fluorinated greenhouse gas with a Global Warming Potential(GWP)=675.
 R410A is a fluorinated greenhouse gas with a Global Warming Potential(GWP)=2088.

 Make sure that no air enters the refrigerant circuit when the unit is installed and removed.
 If air enters the refrigerant circuit, the pressure in the refrigerant circuit will become too high, which
- Be sure to use the prescribed pipes, flare nuts and tools for R32 or R410A.

 Using existing parts (for R22 or R407C) can cause refrigerant circuit burst resulting in unit failure and
- Using existing parts (for R22 or R407C) can cause reingerant circuit burst resulting in unit failure and personal injury.

 Be sure to connect both liquid and gas connecting pipes properly before operating the compressor.

 Do not open the liquid and gas operation valves before completing piping work, and evacuation.
- work, and evacuation.

 If the compressor is operated when connecting pipes are not connected and operation valves are open, air can be sucked into the refrigerant circuit which can cause anomalous high pressure resulting in burst or personal injury.

 Be sure to tighten the flare nuts to specified torque using the torque wrench. Tightening flare nuts with excess torque can cause burst and refrigerant leakage after a long period.

- During pump down work, be sure to stop the compressor before closing operation valves and removing connecting pipes.

 If the connecting pipes are removed when the compressor is in operation and operation valves are open, air can be sucked into the refrigerant circuit which can cause anomalous high pressure resulting in burst or personal injury.

 In the event of refrigerant leakage during installation, be sure to ventilate the working area properly.

- working area properly.

 If the refrigerant comes into contact with naked flames, poisonous gases will be produced.

 Electrical work must be carried out by the qualified electrician, strictly in accordance with national or regional electricity regulations.

 Incorrect installation can cause electric shock, fire or personal injury.
- Make sure that earth leakage breaker and circuit breaker of appropriate capacities are installed.

 Circuit breaker should be able to disconnect all poles under over current. Absence of appropriate
- breakers can cause electric shock, personal injury or property damage.

 Be sure to switch off the power source in the event of installation, mainte-
- Be sure to switch off the power source in the event of installation, maintenance or service.

 If the power source is not switched off, there is a risk of electric shock, unit failure or personal injury.

 Be sure to tighten the cables securely in terminal block and relieve the cables properly to prevent overloading the terminal blocks.

 Loose connections or cable mountings can cause anomalous heat production or fire.

 Do not process, splice or modify the power cable, or share the socket with

- other power plugs.

 Improper power cable or power plug can cause fire or electric shock due to poor connection, insufficient insulation or over-current.

 Do not perform any change in protective device or its setup condition yourself.
- Changing protective device specifications can cause electric shock, fire or burst.

 Be sure to clamp the cables properly so that they do not touch any internal component of the unit.

 If cables touch any internal component, it can cause overheating and fire.

- If cables touch any internal component, it can cause overheating and fire.

 Be sure to install service cover properly.

 Improper installation can cause electric shock or fire due to intrusion of dust or water.

 Be sure to use the prescribed power and connecting cables for electrical work.

 Using improper cables can cause electric leak or fire.

 This appliance must be connected to main power source by means of a circuit breaker or switch with a contact separation of at least 3mm.

 Improper electrical work can cause unit failure or personal injury.

 When plugging this unit, a plug conforming to the standard IEC60884-1 must be used.
- - Using improper plug can cause electric shock or fre.

 Be sure to connect the power source cable with power source properly.

 Improper connection can cause intrusion of dust or water resulting in electric shock or fire.

⚠ CAUTION

- Take care when carrying the unit by hand.
 If the unit weight is more than 20kg, it must be carried by two or more persons.
 Do not carry the unit by the plastic straps. Always use the carry handle.
 Do not install the outdoor unit in a location where insects and small animals can inhabit.
- can inhabit.

 Insects and small animals can enter the electrical parts and cause damage resulting in fre or personal injury. Instruct the user to keep the surroundings clean.

 If the outdoor unit is installed at height, make sure that there is enough space for installation, maintenance and service.

 Insufficient space can result in personal injury due to falling from the height.

 Do not install the unit near the location where neighbours are bothered by

- noise or air generating from the unit.

 It can affect surrounding environment and cause a claim.

 Do not install in the locations where unit is directly exposed to corrosive gases (like sulphicle gas, chloride gas), sea breeze or salty atmosphere.

 It can cause corrosion of heat exchanger and damage to plastic parts.

 Do not install the unit close to the equipments that generate electromagnetic waves and/or bligh-harmonic waves.

- waves and/or high-harmonic waves.

 Equipment such as inverters, standby generators, medical high frequency equipments and telecommunication equipments can affect the system, and cause malfunctions and breakdowns.

 The system can also affect medical equipment and telecommunication equipment, and obstruct its function or cause jamming.

- Do not install the unit in the locations where:
- There are heat sources nearby.

 Unit is directly exposed to rain or sunlight.

- Unit is directly exposed to rain or sunlight.
 There is any obstacle which can prevent smooth air circulation from inlet and outlet side of the unit.
 Unit is directly exposed to oil mist and steam such as kitchen.
 Chemical substances like ammonia (organic fertilizer), calcium chloride (snow melting agent) and acid (sulfurous acid etc.), which can harm the unit, will generate or accumulate.
 Drain water can not be discharged properly.
 TV set or radio receiver is placed within 1m.
 Height above sea level is more than 1000m.
 It can cause performance degradation, corrosion and damage of components, unit malfunction and fire.

- Dispose of all packing materials properly.

 Packing materials contain nails and wood which can cause personal injury.
- Keep the polybag away from children to avoid the risk of suffocation.
- **Do not put anything on the outdoor unit.**Object may fall causing property damage or personal injury

- Object may tail causing property gamage or personal injury.

 Do not touch the aluminum fin of the outdoor unit.

 Aluminium fin temperature is high during heating operation. Touching fin can cause burn.

 Do not touch any refrigerant pipe with your hands when the system is in operation. During operation the refrigerant pipes become extremely hot or extremely cold depending on the operating condition. Touching pipes can cause personal injury like burn (hot/cold).

 Install isolator or disconnect switch on the power source wiring in accordance with the local codes and regulations.

 The isolator should be locked in OFF state in accordance with EN60204-1.

1. ACCESSORIES AND TOOLS Locally procured parts Tools for installation Work Standard accessories (supplied with indoor unit) Plus headed driv Hole core drill (65mm in diameter (a) Sleeve (1po 680 1рс (1) Installation board (6) Batteries [R03 (AAA, Micro) 1.5V] (b) Sealing plate (1pc) Wrench key (Hexagon) [4mm] Knife Inclination plate (1pc) Flaring tool set* *描* 1pc (2) Remote control (7) Air-cleaning filters 2pc: (d) Putty Tape measure Gas leak detector (e) Connecting cable Forque wrench 14.0-82.0N·m (1.4-8.2kgf·m) Pipe bender (8) Filter holders 2pc (f) Drain hose (extension hose) Piping cover (g) (for insulation of connection piping) Gauge for projection adjustment (Used when flare is made by us-ing conventional flare tool) Plier Tapping screws (for installation board ø4 X 25mm) (9) Insulation (#486 50 X 100 t3) / Pipe cutter 10pc (h) Clamp and screw (for finishing work) * Designed specifically for R32 or R410A (5) (for remote control holder ø3.5 X 16mm) 2pcs (i) Electrical tape

2. SELECTING INSTALLATION LOCATION

After getting customer's approval, select installation location according to following guidelines.

- Indoor unit
 Where there is no obstruction to the airflow and where the cooled and heated air can be evenly distributed.
 A colid place where the unit or the unit
- distributed.

 A solid place where the unit or the wall will not vibrate.

 A place where there will be enough space for servicing. (Where space mentioned on the right side can be secured.)

 Where it is easy to conduct wiring and piping work.

 A place where unit is not directly exposed to sunlight or street light.

 A place where it can be easily drained.

 A place separated at least 1m away from the television or the radio. (To prevent interference to impress and spunds.)

- ages and sounds.)

 A place where this unit is not affected by the high frequency equipment or electric equipment.

 Avoid installing this unit in place where there is much oil mist.

 A place where there is no electric equipment or household.

 Install the indoor unit on the wall where the height from the floor to the bottom of the unit is more than

2. Remote control

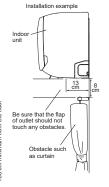

- A place where the air-conditioner can receive the signal surely during operating the remote control.
 A place where it is not affected by the TV, radio etc.
 Do not place where it is exposed to direct sunlight or near heat devices such as a stove.

5 cm minimum from the wall

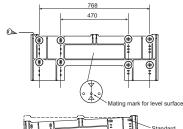

10 cm minimum from the ceiling

Installation board 15 cm minimum from the wall

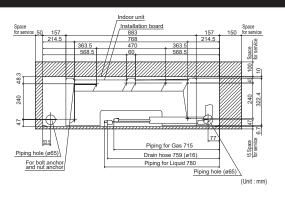

3. INSTALLING INSTALLATION BOARD

- Installation board should be installed on the wall which can support the weight of the indoor unit.
 Adjustment of the installation board in the horizontal direction is to be conducted with 8 screws in a
- temporary tightened state.
 With the standard hole as a center, adjust the board and level it.

⚠ CAUTION

Improper adjustment of the installation board can cause water leakage

4. DRILLING HOLE AND FIXTURE OF SLEEVE

When drilling the wall that contains a metal lath, wire lath or metal plate, be sure to use sealing plate, sleeve and inclination plate (Locally procured parts)

(1) Drill a hole with hole

core drill.

(2) Cut sleeve to adjust to wall

thickness. In case of rear piping draw out, cut off the lower and the right side portions of the sleeve collar.

(3) Fix sealing plate, sleeve

and inclination plate

(4) After piping work seal the hole in the wall with putty.

⚠ WARNING

Completely seal the hole in the wall with putty. If not sealed properly, dust, insects, small animals, and highly humid air may enter the room from outside, which could result in fire or other hazards.

⚠ CAUTION

Completely seal the hole in the wall with putty. If not sealed properly, furniture and other fixtures may be damaged by water leakage or condensation.

5. ELECTRICAL WIRING WORK

- Before installation, make sure that the power source complies with the air-conditioner's power speci-
- Carry out electrical wiring work according to following guidelines.

1. Preparing cable

(1) Selecting cable

Select the connecting cable in accordance with the specifications mentioned below.

4-core* 1.5mm² conformed with 60245 IEC57

* 1 Earth wire is included (Yellow/Green).

(2) Arrange each wire length as shown below.

Make sure that each wire is stripped 10mm from the end.

(3) Attach round crimp-type terminal to each wire as shown in the below. Select the size of round crimp-type terminal after considering the specifications of terminal block and wire diameter.

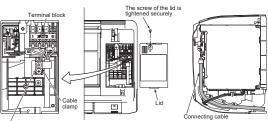

2. Connecting cable

- 2. Connecting cable
 (1) Open the air inlet panel.
 (2) Remove the lid.
 (3) Remove the cable clamp.
 (4) Connect the connecting wires to the terminal block.
 (5) Fix the connecting cable by cable clamp.
 (6) Fix the lid.

- (7) Close the air inlet panel.

NOTE

Take care not to confuse the terminal numbers for indoor and outdoor connections.

· Earth wire shall be Yellow/Green (Y/G) in color and longer than other AC wires for safety reason

⚠ WARNING

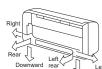

Incorrect wiring connection can cause malfunction or fire

6. FORMING PIPING AND DRAIN HOSE

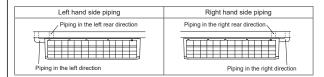

1. Forming pipingPiping is possible in the right, rear, downward, left, left rear or left downward direction

NOTE

Sufficient care must be taken not to damage the panels when connecting pipes.

Left dov

Forming of pipings.

• Hold the bottom of the piping and fix direction before stretching it and shaping it.

- Taping of the exterior
 Tape only the portion that goes through the wall.
 Always tape the wiring with the piping.

2. Drain change procedures

- Remove the screw and drain hose.
 Remove the drain cap by hand or pliers.
- (3) Insert the drain cap which was removed a (4) Install the drain hose and screw securely. Insert the drain cap which was removed at procedure (2) securely using a hexagonal wrench etc.

⚠ CAUTION

Incorrect installation of drain hose and cap can cause water leakage

7. DRAINAGE WORK

Arrange the drain hose in a downward angle. Avoid the following drain piping.

Pour water to the drain pan located under the heat exchanger, and ensure that the water is discharged outdoor.
 When extended drain hose is present inside the room, insulate it securely with heat insulator available in the market.

Since this air-conditioner is designed to collect dew drops on the rear surface to the drain pan, do not install the connecting wire above the gutter.

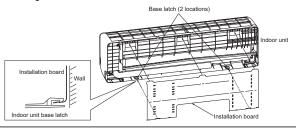

Incorrect drainage work can cause water leakage

8. INSTALLING INDOOR UNIT

Installing the indoor unit to installation board

(1) Pass the pipe through the hole in the wall, and hook the upper part of the indoor unit to the installation board.

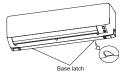

(2) Gently push the lower part to fix the indoor unit base lower latch to installation board.

Removing the indoor unit from installation board

- (1) Push up at the marked portion of the indoor unit base latch, and slightly pull it toward you (both right and left hand sides). (The indoor unit base latch can be removed from the installation (2) Push up the indoor unit upward so that it can be removed from

9. CONNECTING PIPING WORK

1. Preparation of connecting pipe

1.1. Selecting connecting pipe
Select connecting pipe according to the following table.

	Model SRK63	Model SRK71/80	Model SRK100
Gas pipe	ø12.7	ø15.88	ø15.88
Liquid pipe	ø6.35	ø6.35	ø9.52
Discount Hall Information			45.00.4.0

- Pipe wall thickness must be greater than or equal to 0.8 mm (ø15.88:1.0mm)
- Pipe material must be O-type (Phosphorus deoxidized seamless copper pipe ICS 23.040.15, ICS 77.150.30).

1.2. Cutting connecting pipe

- Cut the connecting pipe to the required length with pipe cutter.
 Hold the pipe downward and remove the burrs. Make sure that no foreign material enters the pipe.
 Cover the connecting pipe ends with the tape.

2. Piping work

2.1. Flaring pipe

2.1. Haring pipe (1) Take out flare nuts from the operation valves of indoor unit and engage them onto connecting pipes. (2) Flare the pipes according to table and figure shown below. Flare dimensions for R32 are different from those for conventional refrigerant. Although it is recommended to use the fairing tools designed specifically for R32 or R410A, conventional flaring tools can also be used by adjusting the dimension B with a flare adjustment gauge.

	Copper pipe outer diameter	А
li∥	ø6.35	9.1
	ø9.52	13.2
	ø12.7	16.6
1 1 1	ø15.88	19.7

	Copper pipe	B [Rigid (cl	utch) type]
	outer diameter	R32 or R410A	Conventional
8	ø6.35		
2	ø9.52	0-0.5	1.0-1.5
	ø12.7	0-0.5	1.0-1.5
	ø15.88		

2.2 Connecting pipes
(1) Connect pipes on both liquid and gas sides.
(2) Tighten nuts to specified torque shown in the table below

Operation valve size (mm) Tightening torque (N·m) 14-18 ø6.35 (1/4") ø9.52 (3/8") ø12 7 (1/2' 49-6 ø15.88 (5/8")

⚠ CAUTION

- Do not apply refrigerating machine oil to the flared surface. It can cause refrigerant leakage.
 Do not apply excess torque to the flared nuts. The flared nuts may crack resulting in refrigerant
- leakage.

3. Heating and condensation prevention

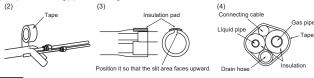

- (1) Dress the connecting pipes (both liquid and gas pipes) with insulation to prevent it from heating and
- Use the heat insulating material which can withstand 120°C or higher temperature. Make sure that insulation is wrapped tightly around the pipes and no gap is left between them.

 (2) Wrap the refrigerant pipings of indoor unit with indoor unit heat insulation using tape.

 (3) Cover the flare-connected joints (indoor side) with the indoor unit heat insulation and wrap it with an in-

- sulation pad (standard accessory provided with indoor unit).

 (4) Wrap the connecting pipes, connecting cable and drain hose with the tape

NOTE

⚠ CAUTION

- Improper insulation can cause condensate(water) formation during cooling operation.
- Improper insulation can clause ontinensate(water) infiniation until gooding operation.
 Condensate can leak or drip causing damage to household property.
 Poor heat insulating capacity can cause pipe outer surface to reach high temperature during heating operation. It can cause cable deterioration and personal injury.

4. Finishing work

- 4. Final limits work
 (1) Make sure that the exterior portion of connecting pipes, connecting cable and drain hose is wrapped properly with tape. Shape the connecting pipes to match with the contours of the pipe assembly route.
 (2) Fix the pipe assembly with the wall using clamps and screws. Pipe assembly should be anchored every 1.5m or less to isolate the vibration.
 (3) Install the service cover securely. Water may enter the unit if service cover is not installed property, resulting in unit malfunction and failure.

⚠ WARNING (only for R32)

- To avoid the risk of fire or explosion, the flared connection must/shall be installed outdoors.
- Reusable mechanical connectors and flared joints are not allowed indoors.

Make sure that the connecting pipes do not touch the components within the unit. If pipes touch the internal components, it may generate abnormal sounds and/or vibrations.

10. HOW TO OPEN, CLOSE, REMOVE AND INSTALL THE AIR INLET PANEL

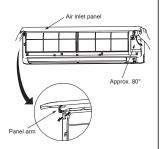

Pull the air inlet panel at both ends of lower part and release latches, then pull up the panel until you feel resistance. (The panel stops at approx. 60° open position)

2. Close

Hold the panel at both ends of lower part, lower it downward slowly, then push it slightly until the latch works.

3. Removing
Open the panel by 80° (as shown in the right illustration) and then pull it forward.

4. Installing 4. Installing Insert the panel arm into the slot on the front panel from the position shown in right illustra-tion, hold the panel at both ends of lower part, lower it downward slowly, then push it slightly until the latch works.

Installing remote control holder

 Select the place where the unit can receive signals. (2) Fix the holder to pillar or wall with wood

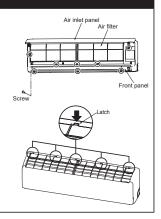

11. HOW TO REMOVE AND INSTALL FRONT PANEL

1. Removing

- (1) Remove the air inlet panel and the air filters.
 (2) Remove the 8 screws.
 (3) Remove the 5 upper latches and then front panel can be removed.

- panel care removed.

 2. Installing
 (1) Cover the unit with the front panel and fix 5 upper latches.
 (2) Secure the front panel with the 8 screws.
 (3) Install the air inlet panel and the air filters.

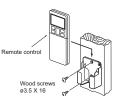

12. INSTALLING REMOTE CONTROL

Mount the batteries

- (1) Slide and take out the cover of backside.
 (2) Mount the batteries [R03 (AAA, Micro),
 ×2 pieces] in the body properly.
 (Fit he poles with the indication marks + & -)
- (3) Set the cover again.
- NOTE
- Do not use new and old batteries together.
 In case the unit is not operated for a long time, take out the batteries

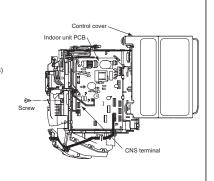

13. TERMINAL CONNECTION FOR AN INTERFACE

- (1) Remove the air inlet panel and
- front panel.
 (2) Remove the control cover.
 (Remove the screw.)
 (3) There is a terminal
 (respectively marked with CNS)
 for the independent board for the indoor control board. While connecting an interface, connect to the respective terminal securely with the connection harness supplied with an optional "Interface connection kit SC-BIKN-E and SC-BIKN2-E" and fasten the connection harness onto the indoor control box with the clamp and screw supplied with

For more details, refer to the user's manual of "Interface connection kit SC-BIKN-E and SC-BIKN2-E".

14. INSTALLING TWO AIR-CONDITIONERS IN THE SAME ROOM

In case two air-conditioners are installed in the same room, apply this setting so that one unit can be operated with only one remote control.

- Setting one remote control
 (1) Slide and take out the cover and batteries.
 (2) Cut the switching line next to the battery
- with wire cutters.
 (3) Set the batteries and cover again.

- Setting one indoor unit

 (1) Turn off the power source and turn it on after 1 minute.

 (2) Send the signal by pressing the ACL switch on the remote control that was set according to the procedure described on the left side.

 (3) Check that the reception buzzer sound "peep" is emitted from the indoor unit. Since the signal is sent about 6 seconds after the ACL switch is pressed, point the remote control to the indoor unit for a while.

If no reception buzzer is emitted, restart the setting from the beginning.

15. PUMP DOWN WORK

For the environmental protection, be sure to pump down when relocating or disposing of the unit. Pump down is the method of recovering refrigerant from the indoor unit to the outdoor unit before the connecting pipes are removed from the unit. When pump down is carried out, forced cooling operation is needed.

Forced cooling operation

- (1) Turn off the power source and turn it on again after 1 miniute.
 (2) Press the ON/OFF button continuously for at
- least 5 seconds. Then operation will start

For the detail of pump down, refer to the installation manual of outdoor unit.

16. INSTALLATION CHECK AND TEST RUN

After finishing the installation work, check the following points again before turning on the power. Conduct a test run and ensure that the unit operates properly. At the same time, explain to the customer how to use the unit and how to take care of the unit following the user's manual.

Before test run

Before test run, check following points.

Power source voltage complies with the rated voltage of air-conditioner.	
Earth leakage breaker and circuit breaker are installed.	
Power cable and connecting cable are securely fixed to the terminal block.	
Both liquid and gas operation valves are fully open.	
No gas leaks from the joints of the operation valves.	
Indoor and outdoor side pipe joints have been insulated.	
Hole on the wall is completely sealed with putty.	
Drain hose and cap are installed properly.	
Screw of the lid is tightened securely.	

Test run
Check following points during test run.

Indoor unit receives signal of remote control.	
Air-conditioning operation is normal.	
There is no abnormal noise.	
Water drains out smoothly.	
Display of remote control is normal.	

After test run

Explain the operating and maintenance methods to the user according to the user's manual.	
Keep this installation manual together with user's manual.	

NOTE

During restart or change in operation mode, the unit will not start operating for approximately 3 minutes. This is to protect the unit and it is not malfunction.

RCT012A220

(2) Installation of outdoor unit

Model SRC63,71,80ZR-W R32 REFRIGERANT USED

• This installation manual deals with an outdoor unit installation only. For an indoor unit installation, refer to page 26.

SAFETY PRECAUTIONS

- Before installation, read the "SAFETY PRECAUTIONS" carefully and strictly follow it during the installa- Be sure to confirm no operation problem on the equipment after completing the installation. If unusual

Before installation, read the "SAFETY PRECAUTIONS" carefully and strictly follow it during the installation and in order to protect yourself.
 The precautionary items mentioned below are distinguished into two levels, AWARNING and AWARNING Indicates a potentially hazardous situation which, if not avoided, can result in serious consequences such as death or severe injury.
 CAUTION Indicates a potentially hazardous situation which if not avoided can result in personal installation manual together with user's manual at a place where it is easily accessible to the user any time. Moreover, ask the user to hand the manuals to a new user, whenever required.

sequences such as death or severe injury.

A CAUTION Indicates a potentially hazardous situation which, if not avoided, can result in personal injury or property damage.

Both mention the important items to protect your health and safety. Therefore, strictly follow them by any means.

MARNING

 Be sure to use only for residential purpose.

If this unit is installed in inferior environment such as machine shop, vehicle (like ship), warehouse, etc.. it can malfunction.

etc., it can maltunction.

Installation must be carried out by the qualified installer completely in accordance with the installation manual.

Installation by non qualified person or incorrect installation can cause serious troubles such as water leak, electric shock, fire and personal injury.

Be sure to wear protective goggles and gloves while performing installation work. Improper safety measures can result in personal injury.

Use the original accessories and the specified components for the installation.

Using parts other than those prescribed may cause water leak electric shock fire and personal injury.

Using parts other than those prescribed may cause water leak, electric shock, fire and personal injury. Do not install the unit near the location where leakage of flammable gases can occur. If leaked gases accumulate around the unit, it can cause fire resulting in property damage and per-

If leaked gases accumulate around the unit, it can cause the resulting in property.

When installing the unit in small rooms, make sure that refrigerant density does not exceed the limit (Reference: ISO5149) in the event of leakage. If refrigerant density exceeds the limit, consult the dealer and install the ventilation system. Otherwise lack of oxygen can occur resulting in serious accident.

Install the unit in a location where unit will remain stable, horizontal and free of any vibration transmission.

Unsuitable installation location can cause the unit to fall resulting in material damage and personal injury.

Do not run the unit with removed panels or protections.

Touching rotating equipments, hot surfaces or high voltage parts can cause personal injury due to entrapment, burn or electric shock.

This unit is designed specifically for R32.

entrapment, burn or electric shock.

This unit is designed specifically for R32.
Using any other refrigerant can cause unit failure and personal injury.

Do not vent R32 into atmosphere.
R32 is a fluorinated greenhouse gas with a Global Warming Potential(GWP)=675.

Make sure that no air enters the refrigerant circuit when the unit is installed and removed.
If air enters the refrigerant circuit, the pressure in the refrigerant circuit will become too high, which can cause burst and personal injury.

can cause burst and personal injury.

Be sure to use the prescribed pipes, flare nuts and tools for R32 or R410A.

Using existing parts (for R22 or R407C) can cause refrigerant circuit burst resulting in unit failure and

personal injury. Be sure to connect both liquid and gas connecting pipes properly before op-Do not open the liquid and gas operation valves before completing piping work, and evacuation.

If the compressor is operated when connecting pipes are not connected and operation valves are open, air can be sucked into the refrigerant circuit which can cause anomalous high pressure result-

open, all can be sucked into the reingerant closer which can cause anomals and, possible to ring in burst or personal injury.

Be sure to tighten the flare nuts to specified torque using the torque wrench. Tightening flare nuts with excess torque can cause burst and refrigerant leakage after a long period.

During pump down work, be sure to stop the compressor before closing operation valves and removing connecting pipes.

If the connecting pipes are removed when the compressor is in operation and operation valves are open, air can be sucked into the refrigerant circuit which can cause anomalous high pressure resulting in burst or personal injury.

ing in burst or personal injury.

In the event of refrigerant leakage during installation, be sure to ventilate the

working area properly.

If the refrigerant comes into contact with naked flames, poisonous gases will be produced.

Electrical work must be carried out by the qualified electrician, strictly in accordance with national or regional electricity regulations.

Incorrect installation can cause electric shock, fire or personal injury.

Make sure that earth leakage breaker and circuit breaker of appropriate capacities are installed.

Circuit breaker should be able to disconnect all poles under over current. Absence of appropriate breakers can cause electric shock, personal injury or property damage.

Be sure to switch off the power source in the event of installation, maintenance or service.

If the power source is not switched off, there is a risk of electric shock, unit failure or personal injury.

Be sure to tighten the cables securely in terminal block and relieve the cables properly to prevent overloading the terminal blocks.

Loose connections or cable mountings can cause anomalous heat production or fire.

Do not process, splice or modify the power cable, or share the socket with other power pluas. Make sure that earth leakage breaker and circuit breaker of appropriate ca-

other power plugs.

Improper power cable or power plug can cause fire or electric shock due to poor connection, insufficient insulation or over-current.

ficient insulation or over-current.

Do not perform any change in protective device or its setup condition yourself.

Be sure to clamp the cables properly so that they do not touch any internal component of the unit.

If cables touch any internal component, it can cause overheating and fire.

It cables touch any internal component, it can cause overneating and fre.

Be sure to install service cover properly.

Improper installation can cause electric shock or fire due to intrusion of dust or water.

Be sure to use the prescribed power and connecting cables for electrical work.

Using improper cables can cause electric leak or fire.

This appliance must be connected to main power source by means of a circuit breaker or switch with a contact separation of at least 3mm.

Improper electrical work can cause unit failure or personal injury.

When plugging this unit, a plug conforming to the standard IEC60884-1 must be used.

Using improper plug can cause electric shock or fire.

Be sure to connect the power source cable with power source properly.

Improper connection can cause intrusion of dust or water resulting in electric shock or fire.

⚠ CAUTION

Take care when carrying the unit by hand.

If the unit weight is more than 20kg, it must be carried by two or more persons.

Do not carry the unit by the plastic straps. Always use the carry handle.

Do not install the outdoor unit in a location where insects and small animals

Insects and small animals can enter the electrical parts and cause damage resulting in fire or personal injury. Instruct the user to keep the surroundings clean.

If the outdoor unit is installed at height, make sure that there is enough space

for installation, maintenance and service.
Insufficient space can result in personal injury due to falling from the height.
Do not install the unit near the location where neighbours are bothered by noise or air generating from the unit.

It can affect surrounding environment and cause a claim.

Do not install in the locations where unit is directly exposed to corrosive

gases (like sulphide gas, chloride gas), sea breeze or salty atmosphere.
It can cause corrosion of heat exchanger and damage to plastic parts.
Do not install the unit close to the equipments that generate electromagnetic

waves and/or high-harmonic waves.

Equipment such as inverters, standby generators, medical high frequency equipments and telecommunication equipments can affect the system, and cause malfunctions and breakdowns.

The system can also affect medical equipment and telecommunication equipment, and obstruct its function or cause jamming.

- Do not install the unit in the locations where:

Do not install the unit in the locations where:

There are heat sources nearby.

Unit is directly exposed to rain or sunlight.

There is any obstacle which can prevent smooth air circulation from inlet and outlet side of the unit.

Unit is directly exposed to oil mist and steam such as kitchen.

Chemical substances like ammonia (organic fertilizer), calcium chloride (snow melting agent) and acid (sulfurous acid etc.), which can harm the unit, will generate or accumulate.

Drain water can not be discharged properly.

Ty set or radio receiver is placed within 1m.

Height above sea level is more than 1000m.

It can cause performance degradation, corrosion and damage of components, unit malfunction and fire.

Dispose of all packing materials properly.

Packing materials contain nails and wood which can cause personal injury.

Keep the polybag away from children to avoid the risk of suffocation.

Do not put anything on the outdoor unit.

Do not put anything on the outdoor unit.

Object may fall causing property damage or personal injury

Do not touch the aluminum fin of the outdoor unit.

Aluminium fin temperature is high during heating operation. Touching fin can cause burn.

Do not touch any refrigerant pipe with your hands when the system is in operation. During operation the refrigerant pipes become extremely hot or extremely cold depending on the operating condition. Touching pipes can cause personal injury like burn (hot/cold). Install isolator or disconnect switch on the power source wiring in accordance with the local codes and regulations.

The isolator should be locked in OFF state in accordance with EN60204-1.

1. ACCESSORIES AND TOOLS

Standard accessories (Supplied with outdoor unit)			Locally procured parts	Tools for installation work				
	Drain	SRC63	4	(a)	Anchor bolt(M10-M12)×4 pcs	Plus headed driver Spanner wrench Vacuum pump*		Vacuum pump*
(1)	1) grommet			(b)	Putty	Knife	Torque wrench [14.0-82.0N·m(1.4-8.2kgf·m)]	Gauge manifold *
		SRC71/80	2	(c)	Electrical tape	Saw	Wrench key (Hexagon) [4mm]	Charge hose *
(2	Drain elbow (3	1	(d)	Connecting pipe	Tape measure F	Flaring tool set *	Vacuum pump adapter*
🗠	(2) Brain cibew		<u> </u>	(e)	Connecting cable	Tape measure	Flating tool set	(Anti-reverse flow type)
		(f)	Power cable	Pipe cutter	Flare adjustment gauge	Gas leak detector *		
		(g)	Clamp and screw (for finishing work)			*Designed specifically for R32 or R410A		

2. OUTDOOR UNIT INSTALLATION

Note as a unit designed for R32

- Do not use any refrigerant other than R32. R32 will rise to pressure about 1.6 times higher tha a conventional refrigerant. A cylinder containing R32 has a light blue indication mark on the top.
- · Do not use a charge cylinder. The use of a charge cylinder will cause the refrigerant composition to

- or hange, which results in performance degradation.

 In charging refrigerant, always take it out from a cylinder in the liquid phase.

 All indoor units must be models designed exclusively for R32. Check connectable indoor unit models in a catalog, etc. (A wrong indoor unit, if connected into the system, will impair proper system operation)

1. Haulage

- Always carry or move the unit with two or more persons.
- The right hand side of the unit as viewed from the front (outlet)

A person carrying the right hand side must take care of this fact.

A person carrying the left hand side must hold the handle provided on the front panel of the unit with his right hand and the corner column section of the unit with his left hand.

⚠ CAUTION

When a unit is hauled, take care of its gravity center position which is shifted towards right hand side If the unit is not hauled properly, it can go off balance and fall resulting in serious injury

2. Selecting the installation location

- elect the suitable installation location where: Unit will be stable, horizontal and free of any vibration transmission. There is no obstacle which can prevent smooth air circulation from inlet and outlet side of the unit.
- There is enough space for service and maintenance of unit.
 Neighbours are not bothered by noise or air generating from the unit.
 Outlet air of the unit does not blow directly to animals or plants.
 Drain water can be discharged properly.
- There is no risk of flammable gas leakage

- There are no other heat sources nearby.

 Unit is not directly exposed to rain or sunlight.

 Unit is not directly exposed to oil mist and steam
- Chemical substances like ammonia (organic fertilizer), calcium chloride (snow melting agent) and acid (sulfurous acid etc.), which can harm the unit, will not generate or accumulate.
 Unit is not directly exposed to corrosive gases (like sulphide gas, chloride gas), sea breeze or salty at-
- No TV set or radio receiver is placed within 1m.
- Unit is not affected by electromagnetic waves and/or high-harmonic waves generated by other equipments.
- Strong wind does not blow against the unit outlet
- · Heavy snowfalls do not occur (If installed, provide proper protection to avoid snow accumulation).

NOTE

If the unit is installed in the area where there is a possibility of strong wind or snow accumulation, the following measures are required

(1) Location of strong wind

Place the unit with its outlet side facing the wall.

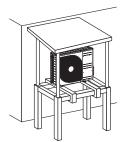

(2) Location of snow accumulation

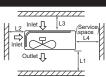

- . Install the unit on the base so that the bottom is higher than snow cover surface.

 Install the unit under eaves or provide the roof on site

3. Installation space

There must be 1 meter or larger space between the unit and the wall in at least 1 of the 4 sides. Walls surrounding the unit from 4 sides is not acceptable. The wall height on the outlet side should be 1200 mm or less. Refer to the following figure and table for details.

	Model SRC63			Model SRC71/80			
Example installation	I	II	III	IV	I	II	III
L1	Open	280	280	180	Open	Open	500
L2	100	75	Open	Open	300	250	Open
L3	100	80	80	80	100	150	100
L4	250	Open	250	Open	250	250	250

NOTE

When more than one unit are installed side by side, provide a 250mm or wider interval between them as a service space.

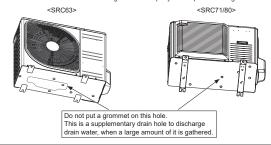

When more than one unit are installed in parallel directions, provide sufficient inlet space so that shortcircuiting may not occur.

4. Drain piping work (If necessary)

Carry out drain piping work by using a drain elbow and a drain grommet supplied separately as accessories if condensed water needs to be drained out.

(1) Install drain elbow and drain grommet.

(2) Seal around the drain elbow and drain grommet with putty or adequate caulking material.

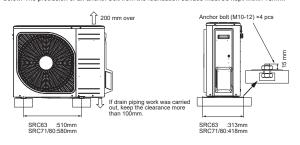

⚠ CAUTION

Do not use drain elbow and drain grommet if there is a possibility to have several consecutive days of sub zero temperature. (There is a risk of drain water freezing inside and blocking the drain.)

5. Installation

- Install the unit on a flat level base.

 While installing the unit, keep space and fix the unit's legs with 4 anchor bolts as shown in the figure below. The protrusion of an anchor bolt from the foundation surface must be kept within 15mm.

⚠ CAUTION

- Install the unit properly so that it does not fall over during earthquake, strong wind, etc
- Make sure that unit is installed on a flat level base. Installing unit on uneven base may result in unit

3. PREPARATION FOR WORK 1. Removing service cover 2. Removing terminal cover ove the screw. Slide service cover downwards and remove it. w and take out terminal cover Terminal cover

4. CONNECTING PIPING WORK

1. Restrictions on unit installation

Abide by the following restrictions on unit installation

Improper installation can cause compressor failure or performance degradation.

	Dimensional restrictions	
Connecting pipe length(L)	30m or less	
Elevation difference between indoor and outdoor units(H)*	20m or less	

* Outdoor unit installation position can be higher as well as lower than the indoor unit installation position.

2.1. Selecting connecting pipe
Select connecting pipe according to the following table

	Model SRC63	Model SRC71/80
Gas pipe	ø12.7	ø15.88
Liquid pipe	ø6.35	ø6.35

- Pipe wall thickness must be greater than or equal to 0.8 mm (ø15.88:1.0mm).
- про наприменя повы об уреател пап от еqual to 0.0 mm (в15.88:1.0mm).
 Pipe material must be O-type (Phosphorus deoxidized seamless copper pipe ICS 23.040.15, ICS 77.150.30).

NOTE

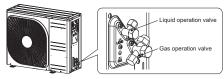

If it is required to reuse the existing connecting pipe system, refer to 5, UTILIZATION OF EXISTING PIPE.

2.2. Cutting connecting pipe

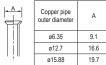

- (1) Cut the connecting pipe to the required length with pipe cutter.
 (2) Hold the pipe downward and remove the burrs. Make sure that no foreign material enters the pipe.
 (3) Cover the connecting pipe ends with the tape.

3. Piping work

Check that both liquid and gas operation valves are fully closed Carry out the piping work with operation valves fully closed.

1. Flaring pipe
1. Take out flare nuts from the operation valves of outdoor unit and engage them onto connecting pipes.
1. Flare the pipes according to table and figure shown below.
1. Flare timensions for R32 are different from those for conventional refrigerant.
1. Although it is recommended to use the flaring tools designed specifically for R32 or R410A, conventional flaring tools can also be used by adjusting the dimension B with a flare adjustment gauge.

Copper pipe	B [Rigid (clutch) type]		
outer diameter	R32 or R410A	Conventional	
ø6.35			
ø12.7	0-0.5	1.0-1.5	
ø15.88			

3.2. Connecting pipes
(1) Connect pipes on both liquid and gas sides

(2) Tighten nuts to specified torque shown in the table below.

Operation valve size (mm)	Tightening torque (N·m)
ø6.35 (1/4")	14-18
ø12.7 (1/2")	49-61
ø15.88 (5/8")	68-82

⚠ CAUTION

Do not apply refrigerating machine oil to the flared surface. It can cause refrigerant leakage.
 Do not apply excess torque to the flared nuts. The flared nuts may crack resulting in refrigerant leakage.

- (1) Connect vacuum pump to gauge manifold. Connect charge hose of gauge manifold to service port of outdoor unit.
 (2) Run the vacuum pump for at least one hour after the vacuum gauge shows -0.1MPa (-76cm Hg).
- (2) Kun the vacuum pump for at least one hour after the vacuum gauge snows -0.1MH2 (-76cm Hg).
 (3) Confirm that the vacuum gauge indicator does not rise even if the system is left for 15 minutes or more. Vacuum gauge indicator will rise if the system has moisture left inside or has a leakage point. Check the system for the leakage point. If leakage point is found, repair it and return to (1) again.
 (4) Close the Handle Lo and stop the vacuum pump.
 Keep this state for a few minutes to make sure that the compound pressure gauge pointer does not a part of the properties of the p

- (5) Remove valve caps from liquid operation valve and gas operation valve.

 (6) Turn the liquid operation valve's rod 90 degree counterclockwise with a hexagonal wrench key to
- (6) Turn the liquid operation valve's rod 90 degree counterclockwise with a nexagonal wienca key to open valve.

 Close it after 5 seconds, and check for gas leakage.

 Using soapy water, check for gas leakage from indoor unit's flare and outdoor unit's flare and valve rods. Wipe off all the water after completing the check.

 (7) Disconnect charging hose from gas operation valve's service port and fully open liquid and gas operation valves. (Do not attempt to turn valve rod beyond its stop.)

 (8) Tighten operation valve caps and service port cap to the specified torque shown in the table below.

Operation valve size (mm)	Operation valve cap tightening torque (N·m)	Service port cap tightening torque (N·m)
ø6.35 (1/4")	20-30	
ø12.7 (1/2")	25-35	10-12
ø15.88 (5/8")	30-40	

↑ CAUTION

To prevent vacuum pump oil from entering into the refrigerant system, use a counterflow prevention adapter.

5. Additional refrigerant charge

Additional refrigerant charge is required only when connecting pipe length exceeds 15 m.

5.1 Calculating additional refrigerant chargeAdditional refrigerant charge can be calculated using the formula given below

<SRC63>

Additional refrigerant charge (g) = { Connecting pipe length (m) - Factory charged length 15 (m) } x 20 (g/m) <SRC71/80>

Additional refrigerant charge (g) = { Connecting pipe length (m) - Factory charged length 15 (m) } x 25 (g/m)

NOTE

- If additional refrigerant charge calculation result is negative, there is no need to remove the refrigerant.
 If refrigerant recharge is required for the unit with connecting pipe length 15m or shorter, charge the factory charged amount as shown in the table below.

	Model SRC63	Model SRC71/80
The factory refrigerant charge amount(kg)	1.25	1.50(71), 1.60(80)
The maximum refrigerant charge amount(kg)	1.55	1.975

- 5.2 Charging refrigerant

 (1) Charge the R32 refrigerant in liquid phase from service port with both liquid and gas operation valves shut. Since R32 refrigerant must be charged in the liquid phase, make sure that refrigerant is discharged from the cylinder in the liquid phase all the time.

 (2) When it is difficult to charge a required refrigerant amount, fully open both liquid and gas operation valves and charge refrigerant, while running the unit in the cooling mode. When refrigerant is charged with the unit being run, complete the charge operation within 30 minutes.

 (3) Write the additional refrigerant charge calculated from the connecting pipe length on the label attached on the service cover.

Running the unit with an insufficient quantity of refrigerant for a long time can cause unit malfunction. Do not charge more than the maximum refrigerant amount. It can cause unit malfunction.

5. UTILIZATION OF EXISTING PIPE

(1) Check whether an existing pipe system is reusable or not by using the following flow chart.

NOTE

- Consult with our distributor in the area, if you need to recover refrigerant and charge it again.

 Consult with our distributor in the area, if you need to recover refrigerant and charge it again.

 Consult with our distributor in the area, if you need to recover refrigerant and charge it again.

 Consult with our distributor in the area, if you need to recover refrigerant and charge it again.

 Consult with our distributor in the area, if you need to recover refrigerant and charge it again.

 Consult with our distributor in the area, if you need to recover refrigerant and charge it again.

 Consult with our distributor in the area, if you need to recover refrigerant and charge it again.

- (a) carry out forced cooling operation of existing unit of so minutes.

 For 'Forced cooling operation' refer to the indoor unit installation manual.

 (b) Stop the indoor fan and carry out forced cooling operation for 3 minutes (Liquid return).

 (c) Close the liquid operation valve of the outdoor unit and carry out pump down operation (Refer to 6. PUMP DOWN).

 (d) Blow with nitrogen gas. If discolored refrigeration oil or any foreign matter is discharged by the blow, wash the pipe system or install a new pipe system.
- (3) Remove the flare nuts from the existing pipe system. Go back to 4.CONNECTING PIPING WORK and proceed to step 2.2 Cutting connecting pipe.

⚠ CAUTION

- · Do not use the old flare nuts (of existing unit). Make sure that the flare nuts supplied with the (new) outdoor unit are used.
- If the flared / compression connection to the indoor unit is located inside the house / room then this pipework can't be reused.
- If the existing piping is specified as liquid pipe ø9.52 or gas pipe ø12.7, refer to the following.

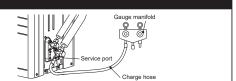

<table of="" pipe<="" th=""><th>e size restrictions></th><th>Model SRC63</th><th>Model SRC71/80</th></table>	e size restrictions>	Model SRC63	Model SRC71/80
Additional charge volume per meter of pip		54g/m	54g/m
Dinasina	Liquid pipe	ø9.52	ø9.52
Pipe size	Gas pipe	ø12.7	ø15.88
Maximum one-way pipe length		10	12
Length covere	ed without additional charge	5	6

Additional charge volume (g) = {Main pipe length (m) - Length covered without additional charge shown in the table (m)} X Additional charge amount per meter of pipe shown in the table (g/m)

#

6. PUMP DOWN

- (1) Connect charge hose of gauge manifold to service port of outdoor unit.
 (2) Close the liquid operation valve with hexagonal wrench key.
 (3) Fully open the gas operation valve with hexagonal wrench key.
 (4) Carry out forced cooling operation (For forced cooling operation procedure, refer to indoor unit installation manual).
 (5) When the low pressure gauge becomes 0.01MPa, close the gas operation valve and stop forced cooling operation.

7. ELECTRICAL WIRING WORK

⚠ WARNING

- Make sure that all the electrical work is carried out in accordance with the national or regional electrical standards.

 Make sure that the earth leakage breaker and circuit breaker of appropriate capacities are installed (Refer to the table given below).

 Do not turn on the power until the electrical work is completed.

 Do not turn on on the power until the electrical work is completed.

 Ob not turn on on the power until the electrical work is completed.

 (It does not improve power factor. Moreover, it can cause an abnormal overheat accident).

Breaker specifications

Model	Phase	Earth leakage breaker	Circuit breaker
SRC63	Cinale phase	Leakage current: 30mA, 0.1sec or less	Over current: 16A
SRC71/80	Sirigle priase	Leakage current. 30mA, 0. Isec or less	Over current: 20A

Specification	Parts No.	Code on LABEL,WIRING				
250V 20A	SSA564A136A	F4				

1.Preparing cable

- 1.Preparing cable

 (1) Selecting cable
 Select the power source cable and connecting cable in accordance with the specifications mentioned below.

 (a) Power source cable
 3-core* 2.5mm² or more, conformed with 60245 IEC57
 When selecting the power source cable length, make sure that voltage drop is less than 2%. If the wire length gets longer, increase the wire diameter.

 (b) Connecting cable
 4-core* 1.5mm², conformed with 60245 IEC57
 * 1 Earth wire is included (Yellow/Green).

 (2) Arrange each wire length as shown below.

 Make sure that each wire is stripped 10mm from the end.

(3) Attach round crimp-type terminal to each wire as shown in the below. Select the size of round crimp-type terminal after considering the specifications of terminal block and wire diameter

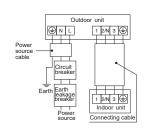

⚠ CAUTION

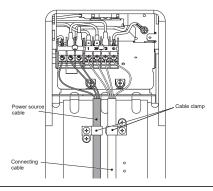

Power source cable and connecting cable must conform to the specifications mentioned in the manual Using cables with wrong specifications may result in unit malfunction.

2.Connecting cable

- (1) Remove the service cover
- (2) Connect the cables according to the instructions and figures given below. (a) Connect the earth wire of power source cable.
 - - An earth wire must be connected before connecting the other wires of power source cable Keep the earth wire longer than the remaining two wires of power source cable.
 - (b) Connect the remaining two wires (N and L) of power source cable.
 (c) Connect the wires of connecting cable. Make sure that for each wire, outdoor and indoor side ter-
- minal numbers match. (3) Fasten the cables properly with cable clamps so that no external force may work on terminal conne
 - Moreover, make sure that cables do not touch the piping, etc. When cables are connected, make sure that all electrical components within the electrical component box are free of loose connector coupling or terminal connection.

<Circuit diagram>

8. FINISHING WORK

1. Heating and condensation prevention

- Ating and condensation prevention

 Dress the connecting pipes (both liquid and gas pipes) with insulation to prevent it from heating and dew condensation.

 Use the heat insulation is wrapped tightly around the pipes and no gap is left between them.

 Wrap the refrigerant pipings of indoor unit with indoor unit heat insulation using tape.

 Cover the flare-connected joints (indoor side) with the indoor unit heat insulation and wrap it with (1) Dress the connecting pipes (both liquid and gas pipes) with insulation to prevent it from heating
- Use the neat insulating material which can windstand 120. C or higher temperature. Make sure that insulation is wrapped tightly around the pipes and no gap is left between them.

 (2) Wrap the refrigerant pipings of indoor unit with indoor unit heat insulation using tape.

 (3) Cover the flare-connected joints (indoor side) with the indoor unit heat insulation and wrap it with an insulation pad (standard accessory provided with indoor unit).

 (4) Wrap the connecting pipes, connecting cable and drain hose with the tape.

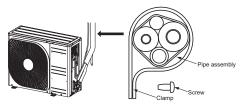

NOTE

Locations where relative humidity exceeds 70%, both liquid and gas pipes need to be dressed with 20mm or thicker heat insulation materials.

⚠ CAUTION

- Improper insulation can cause condensate(water) formation during cooling operation.
- Orndensate can leak or drip causing damage to household property.
 Poor heat insulating capacity can cause pipe outer surface to reach high temperature during heating operation. It can cause cable deterioration and personal injury.

2.Finishing work

⚠ CAUTION

Make sure that the connecting pipes do not touch the components within the unit. If pipes touch the

9. INSTALLATION TEST CHECK POINTS

After finishing the installation work, check the following points again before turning on the power Conduct test run (Refer to indoor unit installation manual) and ensure that the unit operates properly

	,	
Power source voltage complies with the	ne rated voltage of air-conditioner.	
Earth leakage breaker and circuit brea	ker are installed.	
Power cable and connecting cable are	securely fixed to the terminal block.	
Both liquid and gas operation valves a	re fully open	

No gas leaks from the joints of the operation valves.	
Indoor and outdoor side pipe joints have been insulated.	
Drain hose (if installed) is fixed properly.	
Screw of the service cover is tightened properly.	

(3) Safety precautions in handling air-conditioners with flammable refrigerants

WALL TYPE AIR-CONDITIONER R32 REFRIGERANT USED

RSA012A061B

This equipment uses flammable refrigerants. If the refrigerant is leaked, together with an external ignition source, there is a possibility of ignition.

There is information included in the user's manual and/or installation manual.

The user's manual should be read carefully.

A service personnel should be handing this equipment with reference to the installation manual.

- This safety precaution sheet is for R32 refrigerant. If you want to know the type of refrigerant in the unit, check the label attached to the outdoor unit.
- The precautionary items mentioned below are distinguished into two levels, MARNING and CAUTION.

MARNING: Wrong installation would cause serious consequences such as injuries or death

⚠ CAUTION : Wrong installation might cause serious consequences depending on circumstances.

⚠ WARNING

- Strict compliance of the domestic laws must be observed when disposing the appliance
- Do not use means to accelerate the defrosting process or to clean, other than those recommended by the manufacturer.
- The appliance shall be stored in a room without continuously operating ignition sources (for example: open flames, an operating gas appliance or an operating electric heater.
- Do not pierce or burn.
- Be aware that refrigerants may not contain an
- The indoor unit shall be stored in a room that has a minimum area of 4.0 m².

⚠ CAUTION

1. General

- That the installation of pipe-work shall be kept to a minimum.
- That pipe-work shall be protected from physical damage
- That compliance with national gas regulations shall be observed.
- That mechanical connections shall be accessible for maintenance purposes. Keep any required ventilation openings clear of
- obstruction.
- Servicing shall be performed only as recommended by the manufacturer.

2. Unventilated areas

The appliance shall be stored in a well-ventilated area where the room size corresponds to the room area as specified for operation.

Qualification of workers

The staff in servicing operations must hold the national qualification or other relevant qualifications.

4. Information on servicing

- 4.1 Checks to the area
- Prior to beginning work on systems containing flammable refrigerants, safety checks are necessary to ensure that the risk of ignition is minimised.
- For repair to the refrigerating system, 4.3 to 4.7 shall be completed prior to conducting work on the system.
- 4.2 Work procedure
- Work shall be undertaken under a controlled procedure so as to minimise the risk of a flammable gas or vapour being present while the work is being performed
- 4.3 General work area
- All maintenance staff and others working in the local area shall be instructed on the nature of work being carried out.
- Work in confined spaces shall be avoided.
- The area around the workspace shall be sectioned off. Ensure that the conditions within the area have been made safe by control of flammable material.
- 4.4 Checking for presence of refrigerant
- The area shall be checked with an appropriate refrigerant detector prior to and during work, to ensure the technician is aware of potentially toxic or flammable atmospheres.
- Ensure that the leak detection equipment being used is suitable for use with all applicable refrigerants, i.e.
 - non-sparking, adequately sealed or intrinsically safe.

- 4.5 Presence of fire extinguisher
- If any hot work is to be conducted on the refrigeration equipment or any associated parts. appropriate fire extinguishing equipment shall be available to hand. Have a dry powder or CO₂ fire extinguisher adjacent to the charging area.
- 4.6 No ignition sources
- No person carrying out work in relation to a refrigeration system which involves exposing any pipe work shall use any sources of ignition in such a manner that it may lead to the risk of fire or explosion.
- All possible ignition sources, including cigarette smoking, should be kept sufficiently far away from the site of installation, repairing, removing and disposal, during which refrigerant can possibly be released to the surrounding space.
- Prior to work taking place, the area around the equipment is to be surveyed to make sure that there are no flammable hazards or ignition risks.
- "No Smoking" signs shall be displayed.
- 4.7 Ventilated area
- Ensure that the area is in the open or that it is adequately ventilated before breaking into the system or conducting any hot work.
- A degree of ventilation shall continue during the period that the work is carried out.
- The ventilation should safely disperse any released refrigerant and preferably expel it externally into the
- 4.8 Checks to the refrigeration equipment
- Where electrical components are being changed, they shall be fit for the purpose and to the correct specification.
- At all times the manufacturer's maintenance and service guidelines shall be followed.
- If in doubt consult the manufacturer's technical department for assistance.
- The following checks shall be applied to installations using flammable refrigerants:
 - the charge size is in accordance with the room size within which the refrigerant containing parts are installed;
- the ventilation machinery and outlets are operating adequately and are not obstructed;
- if an indirect refrigerating circuit is being used, the secondary circuit shall be checked for the presence of refrigerant;
- marking to the equipment continues to be visible and legible. Markings and signs that are illegible shall be corrected;
- refrigeration pipe or components are installed in a position where they are unlikely to be exposed to any substance which may corrode refrigerant containing components, unless the components are constructed of materials which are inherently resistant to being corroded or are suitably protected against being so corroded.

- 4.9 Checks to electrical devices
- · Repair and maintenance to electrical components shall include initial safety checks and component inspection procedures.
- If a fault exists that could compromise safety, then no electrical supply shall be connected to the circuit until it is satisfactorily dealt with.
- If the fault cannot be corrected immediately but it is necessary to continue operation, an adequate temporary solution shall be used.
- This shall be reported to the owner of the equipment so all parties are advised
- Initial safety checks shall include:
- that capacitors are discharged: this shall be done in a safe manner to avoid possibility of sparking:
- that no live electrical components and wiring are exposed while charging, recovering or purging the system:
- that there is continuity of earth bonding.

(5. Repairs to sealed components)

- During repairs to sealed components, all electrical supplies shall be disconnected from the equipment being worked upon prior to any removal of sealed
- covers, etc.

 If it is absolutely necessary to have an electrical supply to equipment during servicing, then a permanently operating form of leak detection shall be located at the most critical point to warn of a potentially hazardous situation.
- Particular attention shall be paid to the following to ensure that by working on electrical components, the casing is not altered in such a way that the level of protection is affected.
- This shall include damage to cables, excessive number of connections, terminals not made to original specification, damage to seals, incorrect fitting of glands, etc.
- Ensure that the apparatus is mounted securely.
- Ensure that seals or sealing materials have not degraded to the point that they no longer serve the purpose of preventing the ingress of flammable atmospheres.
- Replacement parts shall be in accordance with the manufacturer's specifications

The use of silicon sealant can inhibit the effectiveness of some types of leak detection equipment. Intrinsically safe components do not have to be isolated prior to working on them.

⚠ CAUTION

6. Repair to intrinsically safe components

- Do not apply any permanent inductive or capacitance loads to the circuit without ensuring that this will not exceed the permissible voltage and current permitted for the equipment in use.
- Intrinsically safe components are the only types that can be worked on while live in the presence of a flammable atmosphere.
- The test apparatus shall be at the correct rating.
- Replace components only with parts specified by the manufacturer.
- Other parts may result in the ignition of refrigerant in the atmosphere from a leak.

7. Cabling

Check that cabling will not be subject to wear, corrosion, excessive pressure, vibration, sharp edges or any other adverse environmental effects. The check shall also take into account the effects of aging or continual vibration from sources such as compressors or fans

8. Detection of flammable refrigerants

- Under no circumstances shall potential sources of ignition be used in the searching for or detection of refrigerant leaks.
- A halide torch (or any other detector using a naked flame) shall not be used.

9. Leak detection methods

- Electronic leak detectors may be used to detect refrigerant leaks but, in the case of flammable refrigerants, the sensitivity may not be adequate, or may need re-calibration. (Detection equipment shall be calibrated in a refrigerant-free area.)
- Ensure that the detector is not a potential source of ignition and is suitable for the refrigerant used
- Leak detection equipment shall be set at a percentage of the LFL of the refrigerant and shall be calibrated to the refrigerant employed, and the appropriate percentage of gas (25 % maximum) is confirmed.
- Leak detection fluids are suitable for use with most refrigerants but the use of detergents containing chlorine shall be avoided as the chlorine may react with the refrigerant and corrode the copper
- If a leak is suspected, all naked flames shall be removed/extinguished.
- If a leakage of refrigerant is found which requires brazing, all of the refrigerant shall be recovered from the system, or isolated (by means of shut off valves) in a part of the system remote from the leak.
- For appliances containing flammable refrigerants, oxygen free nitrogen (OFN) shall then be purged through the system both before and during the brazing process.

10. Removal and evacuation

- When breaking into the refrigerant circuit to make repairs – or for any other purpose – conventional procedures shall be used. However, for flammable refrigerants it is important that best practice is followed since flammability is a consideration.
- The following procedure shall be adhered to:
- remove refrigerant;
- purge the circuit with inert gas;
- evacuate:
- purge again with inert gas;
- open the circuit by cutting or brazing.

 The refrigerant charge shall be recovered into the correct recovery cylinders
- For appliances containing flammable refrigerants, the system shall be "flushed" with OFN to render
- This process may need to be repeated several times.
- Compressed air or oxygen shall not be used for purging refrigerant systems.

- · For appliances containing flammable refrigerants, flushing shall be achieved by breaking the vacuum in the system with OFN and continuing to fill until the working pressure is achieved, then venting to atmosphere, and finally pulling down to a vacuum. This process shall be repeated until no refrigerant is within the system.
- When the final OFN charge is used, the system shall be vented down to atmospheric pressure to enable work to take place.
- This operation is absolutely vital if brazing operations on the pipe-work are to take place.
- Ensure that the outlet for the vacuum pump is not close to any ignition sources and that ventilation is available

11. Charging procedures

- In addition to conventional charging procedures, the following requirements shall be followed
- Ensure that contamination of different refrigerants does not occur when using charging equipment. Hoses or lines shall be as short as possible to minimise the amount of refrigerant contained in them.
- Cylinders shall be kept upright.
- Ensure that the refrigeration system is earthed prior to charging the system with refrigerant.
- Label the system when charging is complete (if not already).
- Extreme care shall be taken not to overfill the refrigeration system.
- Prior to recharging the system, it shall be pressure-tested with the appropriate purging gas.
- The system shall be leak-tested on completion of charging but prior to commissioning.

 A follow up leak test shall be carried out prior to
- leaving the site.

12. Decommissioning

- Before carrying out this procedure, it is essential that the technician is completely familiar with the equipment and all its detail.
- It is recommended good practice that all refrigerants are recovered safely.
- Prior to the task being carried out, an oil and refrigerant sample shall be taken in case analysis is required prior to re-use of reclaimed refrigerant.
- It is essential that electrical power is available before the task is commenced.
- a) Become familiar with the equipment and its operation.
- b) Isolate system electrically.c) Before attempting the procedure ensure that:
- mechanical handling equipment is available, if required, for handling refrigerant cylinders; all personal protective equipment is available and
- being used correctly;
- the recovery process is supervised at all times by a competent person:
- recovery equipment and cylinders conform to the appropriate standards.
- d) Pump down refrigerant system, if possible
- e) If a vacuum is not possible, make a manifold so that refrigerant can be removed from various parts of the system.
- f) Make sure that cylinder is situated on the scales before recovery takes place.
 g) Start the recovery machine and operate in
- accordance with manufacturer's instructions
- h) Do not overfill cylinders. (No more than 80 %volume liquid charge).
- i) Do not exceed the maximum working pressure of the cylinder, even temporarily.
 j) When the cylinders have been filled correctly
- and the process completed, make sure that the cylinders and the equipment are removed from site promptly and all isolation valves on the equipment are closed off.
- k) Recovered refrigerant shall not be charged into another refrigeration system unless it has been cleaned and checked.

13. Labelling

- Equipment shall be labelled stating that it has been de-commissioned and emptied of refrigerant. The
- label shall be dated and signed.
 For appliances containing flammable refrigerants, ensure that there are labels on the equipment stating the equipment contains flammable refrigerant.

14. Recovery

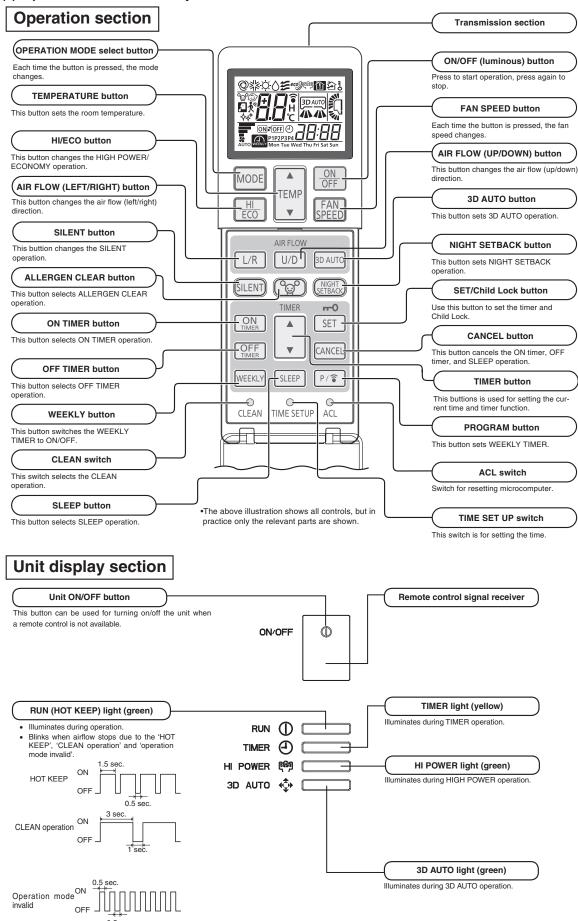

- When removing refrigerant from a system, either for servicing or decommissioning, it is recommended good practice that all refrigerants are removed
- When transferring refrigerant into cylinders, ensure that only appropriate refrigerant recovery cylinders are employed.
- Ensure that the correct number of cylinders for
- holding the total system charge are available. All cylinders to be used are designated for the recovered refrigerant and labelled for that refrigerant (i.e. special cylinders for the recovery of refrigerant).
- Cylinders shall be complete with pressure relief valve and associated shut-off valves in good working order.
- Empty recovery cylinders are evacuated and, if possible, cooled before recovery occurs.
- The recovery equipment shall be in good working order with a set of instructions concerning the equipment that is at hand and shall be suitable for the recovery of all appropriate refrigerants
- including, when applicable, flammable refrigerants. In addition, a set of calibrated weighing scales shall be available and in good working order
- · Hoses shall be complete with leak-free disconnect couplings and in good condition.
- Before using the recovery machine, check that it is in satisfactory working order, has been properly maintained and that any associated electrical components are sealed to prevent ignition in the event of a refrigerant release. Consult manufacturer if in doubt.
- The recovered refrigerant shall be returned to the refrigerant supplier in the correct recovery cylinder, and the relevant Waste Transfer Note arranged. Do not mix refrigerants in recovery units and especially not in cylinders.
- If compressors or compressor oils are to be removed, ensure that they have been evacuated to an acceptable level to make certain that flammable refrigerant does not remain within the lubricant.
- The evacuation process shall be carried out prior to returning the compressor to the suppliers.
- Only electric heating to the compressor body shall be employed to accelerate this proces
- When oil is drained from a system, it shall be carried out safely.

15. Other safety precautions

- A brazed, welded, or mechanical connection shall be made before opening the valves to permit refrigerant to flow between the refrigerating system
- Flammable refrigerant used, refrigerant tubing protected or enclosed to avoid mechanical damage (IEC/EN 60335-2-40/A1).
- Tubing protected to extent that it will not be handled or used for carrying during moving of product (IEC/ EN 60335-2-40/A1).
- Flammable refrigerant used, low temperature solder alloys, such as lead/tin alloys, not acceptable for pipe connections (IEC/EN 60335-2-40/A1).
- · When there is flare connection, it must be installed outdoor.

9. OUTLINE OF OPERATION CONTROL BY MICROCOMPUTER

(1) Operation control function by wireless remote control

(2) Unit ON/OFF button

When the wireless remote control batteries become weak, or if the wireless remote control is lost or malfunctioning, this button may be used to turn the unit on and off.

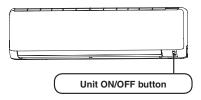

(a) Operation

Push the button once to place the unit in the automatic mode. Push it once more to turn the unit off.

(b) Details of operation

The unit will go into the automatic mode in which it automatically determines, from indoor temperature (as detected by sensor), whether to go into COOL, DRY or HEAT modes.

Function Operation mode	Indoor temperature setting	Fan speed	Flap/Louver	Timer Switch
COOL				
DRY	About 24°C	Auto	Auto	Continuous
HEAT				

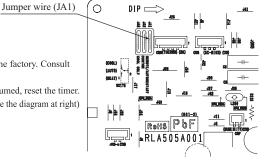

(3) Auto restart function

- (a) Auto restart function records the operational status of the air-conditioner immediately prior to be switched off by a power cut, and then automatically resumes operations after the power has been restored.
- **(b)** The following settings will be cancelled:
 - (i) Timer settings
 - (ii) HIGH POWER operations

Notes (1) Auto restart function is set at on when the air-conditioner is shipped from the factory. Consult with your dealer if this function needs to be switched off.

- (2) When power failure ocurrs, the timer setting is cancelled. Once power is resumed, reset the timer.
- (3) If the jumper wire (JA1) "AUTO RESTART" is cut, auto restart is disabled. (See the diagram at right)

(4) Installing two air-conditioners in the same room

When tow air-conditioners are installed in the room, use setting when the two air-conditioners are not operated with one wireless remote control. Set the wireless remote control and indoor unit.

(a) Setting the wireless remote control

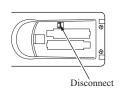

- (i) Pull out the cover and take out batteries.
- (ii) Disconnect the switching line next to the battery with wire cutters.
- (iii) Insert batteries, Close the cover.

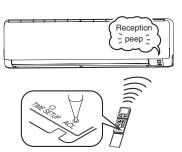

(b) Setting an indoor unit

- (i) Turn off the power source, and turn it on after 1 minute.
- (ii) Point the wireless remote control that was set according to the procedure described on the left side at the indoor unit and send a signal by pressing the ACL switch on the wireless remote control.

Since the signal is sent in about 6 seconds after the ACL switch is pressed, point the wireless remote control at the indoor unit for some time.

(iii) Check that the reception buzzer sound "peep" is emitted from the indoor unit.At completion of the setting, the indoor unit emits a buzzer sound "peep".(If no reception tone is emitted, start the setting from the beginning again.)

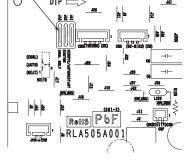

(5) Selection of the annual cooling function

(a) The annual cooling control is valid from factory default setting. It is possible to disable by cutting jumper wire (JA3), or changing the setting of dip switch (SW2-4) on the interface kit (option) PCB if it is connected.

Jumper wire (JA3)	Interface kit (SC-BIKN-E) (SC-BIKN2-E) SW2-4	Function
Shorted	ON	Enabled factory default setting
Shorted	OFF	Disabled
Open	ON	Disabled
Open	OFF	Disabled

Jumper wire (JA3)

Note: (1) Default states of the jumper wire (JA3) and the interface kit at the shipping from factory –On the PCB, the dip switch (SW2-4) is set to enable the annual cooling function.

(2) To cancel the annual cooling setting, consult your dealer.

(b) Content of control

- (i) If the outdoor air temperature sensor (TH2) detects below 5°C, the indoor fan speed is switched to 8th step. (It is not possible to change.)
- (ii) If the outdoor air temperature sensor (TH2) detects higher than 7°C, the indoor fan speed is changed to the normal control speed.

ON OFF 5 7 Outdoor air temperature (°C)

(6) High power operation

Pressing the HI/ECO button intensifies the operating power and initiates powerful cooling or heating operation for 15 minutes continuously. The wireless remote control displays HIGH POWER mark and the FAN SPEED display disappears.

- (a) During the HIGH POWER operation, the room temperature is not controlled. When it causes an excessive cooling or heating, press the HI/ECO button again to cancel the HIGH POWER operation.
- (b) HIGH POWER operation is not available during dehumidifying and the program timer operations.
- (c) When HIGH POWER operation is set after setting ON TIMER operation, HIGH POWER operation will start from the set time.
- (d) When the following operation are set, HIGH POWER operation will be canceled.
 - ① When the HI/ECO button is pressed again. (The operation mode will be changed to the ECONOMY operation.)
 - ② When the operation mode is changed.
 - ③ When it has been 15 minutes since HIGH POWER operation has started.
 - ④ When the 3D AUTO botton is pressed.
 - (5) When the SILENT botton is pressed.
 - ⑥ When the NIGHT SETBACK botton is pressed.
- (e) Not operable while the air-conditioner is OFF.
- (f) After HIGH POWER operation, the sound of refrigerant flowing may be heard.

(7) Economy operation

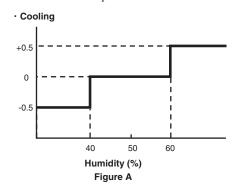

Pressing the HI/ECO button initiate a soft operation with the power suppressed in order to avoid an excessive cooling or heating. The unit operates 1.5° C higher than the setting temperature during cooling or 2.5° C lower than that during heating. The wireless remote control displays ECONO mark and the FAN SPEED display disappears.

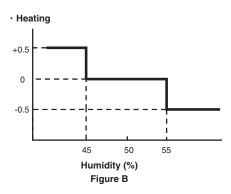

- (a) It will go into ECONOMY operation at the next time the air-conditioner runs in the following cases.
 - ① When the air-conditioner is stopped by ON/OFF button during ECONOMY operation.
 - ② When the air-conditioner is stopped in SLEEP or OFF TIMER operation during ECONOMY operation.
 - ③ When the operation is retrieved from SELF CLEAN or ALLERGEN CLEAR operation.
- (b) When the following operation are set, ECONOMY operation will be canceled.
 - ① When the HI/ECO button is pressed again.
 - ② When the operation mode is changed from DRY to FAN.
 - ③ When the NIGHT SETBACK botton is pressed.
- (c) Not operable while the air-conditioner is OFF.

(d) The setting temperature is adjusted according to the following table.

			(Unit : deg°C)
Item Mode		Cooling	Heating
Т	1	+0.5	-1.0
Temperature adjustment	2	+1.0	-2.0
	3	1.0+Figure A	-2. 0 + Figure B

- ① at the start of operation.
- ② one hour after the start of operation.
- 3 two hours after the start of operation.

(8) Flap and louver control

Control the flap and louver by AIR FLOW U/D (UP/DOWN) and L/R (LEFT/RIGHT) button on the wireless remote control.

(a) Flap

Each time when you press the AIR FLOW U/D (UP/DOWN) button the mode changes as follows.

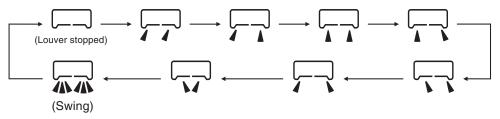

• Angle of Flap from Horizontal

Remote control display	<u>-</u> Q	Ţ	Ù	Ģ	Ÿ
COOL , DRY, FAN	Approx. 5°	Approx. 20°	Approx. 35°	Approx. 50°	Approx. 70°
HEAT	Approx. 20°	Approx. 35°	Approx. 45°	Approx. 60°	Approx. 70°

(b) Louver

Each time when you press the AIR FLOW L/R (LEFT/RIGHT) button the mode changes as follows.

• Angle of Louver

Remote control display					
Center installation	Left approx. 50°	Left approx. 20°	Center	Right approx. 20°	Right approx. 50°
Right end installation	Left approx. 50°	Left approx. 45°	Left approx. 30°	Center	Right approx. 20°
Left end installation	Left approx. 20°	Center	Right approx. 30°	Right approx. 45°	Right approx. 50°

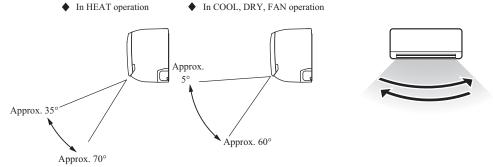

(c) Swing

(i) Swing flap

Flap moves in upward and downward directions continuously.

(ii) Swing louver

Louver moves in left and right directions continuously.

(d) Memory flap (Flap or Louver stopped)

When you press the AIR FLOW (UP/DOWN or LEFT/RIGHT) button once while the flap or louver is operating, it stops swinging at the position. Since this angle is memorized in the microcomputer, the flap or louver will automatically be set at this angle when the next operation is started.

(e) When not operating

The flap returns to the position of air flow directly below, when operation has stopped.

(9) 3D auto operation

Control the flap and louver by 3D AUTO button on the wireless remote control.

Air flow selection and air flow direction are automatically controlled, allowing the entire indoor to efficiently conditioned.

- (a) During cooliong and heating (Including auto cooling and heating)
 - (i) Air flow selection is determined according to indoor temperature and setting temperature.

Operation mode	Air flow selection						
Operation mode	AUTO			MED	LO	ULO	
Cooling	Indoor temp. – Setting temp. >5°C	Indoor temp. – Setting temp. ≦ 5°C		MED	LO	ULO	
Cooling	HIGH POWER	AUTO	HI				
Hosting	Setting temp. – Indoor temp. >5°C	Setting temp. – Indoor temp. ≦ 5°C	111				
Heating	HIGH POWER	AUTO					

- (ii) Air flow direction is controlled according to the indoor temperature and setting temperature.
 - 1) When 3D auto operation starts

	Cooling Heating			
Flap	Up/down swing			
Louver	Wide (Fixed)	Center (Fixed)		

2) When Indoor temp. – Setting temp. is $\leq 5^{\circ}$ C during cooling and when Setting temp. – Indoor temp. is $\leq 5^{\circ}$ C during heating, the system switches to the following air flow direction control. After the louver swings left and right symmetrically for 3 cycles, control is switched to the control in 3).

	Cooling Heating			
Flap	Horizontal blowing (Fixed) Slant forwardl blowing (Fix			
Louver	Left/right swing			

3) After the flap swings for 5 cycles, control is switched to the control in 4).

	Cooling Heating			
Flap	Up/down swing			
Louver	Center (Fixed)			

4) For 5 minutes, the following air flow direction control is carried out.

	Cooling Heating			
Flap	Horizontal blowing (Fixed)	Slant forwardl blowing (Fixed)		
Louver	Wide (Fixed)			

5) After 5 minutes have passed, the air flow direction is determined according to the indoor temperature and setting temperature.

Operation mode		Air flow direction contorol	
Cooling	Indoor temp. – Setting temp. ≦2°C	2°C < Indoor temp. – Setting temp. ≦5°C	Indoor temp. – Setting temp. > 5°C
Cooling	The control in 4) continues.	Control returns to the control in 2).	Control returns to the control in 1).
Hosting	Setting temp. – Indoor temp. ≦2°C	2°C < Setting temp. – Indoor temp. ≦5°C	Setting temp. – Indoor temp. > 5°C
Heating	The control in 4) continues.	Control returns to the control in 2).	Control returns to the control in 1).

(b) During dehumidifying operation (including auto dehumidifying operation)

Flap	Horizontal blowing (Fixed)	
Louver	Wide (Fixed)	

(10) Timer operation

(a) Comfortable timer setting (ON timer)

The unit starts the operation 5 to 60 minites earlier so that the room can approach optimum temperature at ON timer.

(b) Sleep timer operation

Pressing the SLEEP button causes the temperature to be controlled with respect to the set temperature.

(c) OFF timer operation

The Off timer can be set at a specific time (in 10-minute units) within a 24-hour period.

(d) Weekly timer operation

Timer operation (ON timer, OFF timer) can be set up to 4 times a day for each weekday.

(11) Silent mode

As "Silent mode start" signal is received from the wireless remote control, it operates by dropping the outdoor fan tap and the compressor command speed.

	SRK63ZR-W	SRK71ZR-W	SRK80ZR-W
Outdoor fan tap (Upper limit)	5th speed	3rd speed	3rd speed
Compressor command speed	48 rps	50 rps	54 rps

(12) Night setback

As "Night setback" signal is received from the wireless remote control, the heating operation starts with the setting temperature at 10°C.

(13) Installation location setting

When the indoor unit is installed at the end of a room, control the air flow direction so that it is not toward the side walls. If you set the wireless remote control installation position, keep it so that the air flow is within the range shown in the following figure.

(a) Setting

(i) If the air-conditioning unit is running, press the ON/OFF button to stop.

The installation location setting cannot be made while the unit is running.

(ii) Press the AIR FLOW U/D (UP/DOWN) button and the AIR FLOW L/R (LEFT/RIGHT) button together for 5 seconds or more.

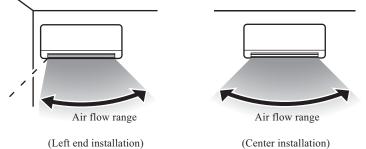

The installation location display illuminates.

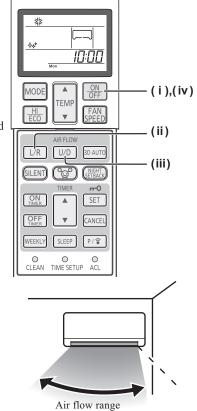

(iii) Setting the air-conditioning installation location.

Press the AIR FLOW L/R (LEFT/RIGHT) button and adjust to the desired location.

Each time the AIR FLOW L/R (LEFT/RIGHT) button is pressed, the indicator is switched in the order of:

(Right end installation)

(iv) Press the ON/OFF button.

The air-conditioner's installation location is set.

Press within 60 seconds of setting the installation location (while the installation location setting display illuminates).

(14) Outline of heating operation

(a) Operation of major functional components in heating mode

	Heating					
	Thermostat ON	Thermostat OFF	Failure			
Compressor	ON	OFF	OFF			
Indoor fan motor	ON	ON(HOT KEEP)	OFF			
Outdoor fan motor	ON	OFF (few minutes ON)	OFF			
4-way valve	ON	ON	OFF (3 minutes ON)			

(b) Details of control at each operation mode (pattern)

(i) Fuzzy operation

Deviation between the indoor temperature setting correction temperature and the return air temperature is calculated in accordance with the fuzzy rule, and used for control of the air capacity and the compressor speed.

Model Fan speed	SRK63ZR-W	SRK71ZR-W	SRK80ZR-W
AUTO	12-120rps	20-116rps	20-120rps
HI	12-120rps	20-116rps	20-120rps
MED	12-120rps	20-116rps	20-120rps
LO	12-94rps	20-78rps	20-86rps
ULO	12-54rps	20-46rps	20-52rps

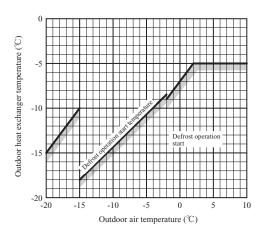

When the defrosting, protection device, etc. is actuated, operation is performed in the corresponding mode.

(ii) Hot keep operation

If the hot keep operation is selected during the heating operation, the indoor fan motor is controlled based on the temperature of the indoor heat exchanger (Th2) to prevent blowing of cool wind.

(c) Defrost operation

- (i) Starting conditions (Defrost operation can be started only when all of the following conditions are satisfied.)
 - 1) After start of heating operation
 - When it elapsed 35 minutes. (Accumulated compressor operation time)
 - 2) After end of defrost operation
 - When it elapsed 35 minutes. (Accumulated compressor operation time)
 - 3) Outdoor heat exchanger sensor (TH1) temperature
 - When the temperature has been below -5°C for 3 minutes continuously.
 - 4) The difference between the outdoor air sensor temperature and the outdoor heat exchanger sensor temperature
 - The outdoor air temperature ≥ -2 °C : 7°C or higher
 - -15°C ≤ The outdoor air temperature < -2 °C : 11/15 × The outdoor air temperature + 7°C or higher
 - The outdoor air temperature $< -15^{\circ}\text{C} : -5^{\circ}\text{C}$ or higher

5) During continuous compressor operation

In addition, when the speed command from the indoor control of the indoor unit during heating operation has counted 0 rps 10 times or more and all conditions of 1), 2), 3) and 5) above and the outdoor air temperature is 3°C or less are satisfied (note that when the temperature for outdoor heat exchanger sensor (TH1) is -5°C or less: 62 rps or more, -4°C or less: less than 62 rps), defrost operation is started.

- (ii) Ending conditions (Operation returns to the heating cycle when either one of the following is satisfied.)
 - 1) Outdoor heat exchanger sensor (TH1) temperature: 13°C (model SRK63 : 10°C) or higher
 - 2) Continued operation time of defrost operation \rightarrow For more than 17 minutes.

• Defrost operation

*Depends on an operation condition, the time can be longer than 7 minutes.

(15) Outline of cooling operation

(a) Operation of major functional components in cooling mode

	Thermostat ON	Thermostat OFF	Failure
Compressor	ON	OFF	OFF
Indoor fan motor	ON	ON	OFF
Outdoor fan motor	ON	OFF (few minutes ON)	OFF (few minutes ON)
4-way valve	OFF	OFF	OFF

(b) Detail of control in each mode (Pattern)

1) Fuzzy operation

During the fuzzy operation, the air flow and the compressor speed are controlled by calculating the difference between the indoor temperature setting correction temperature and the return air temperature.

Model	SRK63ZR-W	SRK71ZR-W	SRK80ZR-W	
Fan speed	Shkoszn-w	3HK/12H-W	SHK0UZH-W	
AUTO	12-106rps	20-76rps	20-98rps	
HI	12-106rps	20-76rps	20-98rps	
MED	12-68rps	20-56rps	20-64rps	
LO	12-50rps	20-40rps	20-46rps	
ULO	12-32rps	20-26rps	20-26rps	

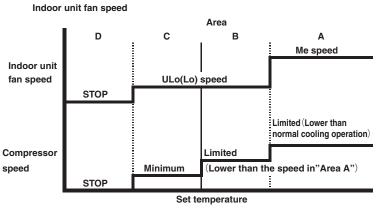

(16) Outline of dry(dehumidifying) operation

(a) Purpose of DRY mode

The purpose is "Dehumidification", and not to control the humidity to the target condition. Indoor/outdoor unit control the operation condition to reduce the humidity, and also prevent over cooling.

(b) Outline of control

(i) Indoor unit fan speed and compressor are controlled by the area which is selected by the temperature difference.

Difference between set temperature and return temperature

(ii) The indoor unit check the current area by every 5 minutes, and operate by the next checking.

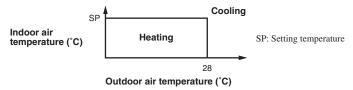

(c) Other

When the outside temperature and room temperature is low for cooling operation, indoor unit can not operate in cooling, and dehumidifying. In this case, the units operate in heating to rise the room temperature and after that start dehumidifying operation.

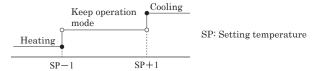

(17) Outline of automatic operation

(a) Determination of operation mode

Operation mode is determined by indoor air temperature and outdoor air temperature as following.

(b) Operation mode is changes when keep cooling and heating thermostat off 20 minutes and be satisfied with following conditions. If the setting temperature is changed with the remote control, the operation mode is judged immediately.

Indoor air temperature - Setting temperature (°C)

XIt can not be changed to heating mode if outdoor air temperature is 28℃ or higher.

- (c) When the unit is started again within one hour after the stop of automatic operation or when the automatic operation is selected during heating, cooling or DRY mode, the unit is operated in the previous operation mode.
- (d) Setting temperature can be adjusted within the following range. There is the relationship as shown below between the signals of the wireless remote control and the setting temperature.

														Unit: °C
					Si	gnals o	fwirele	ss remo	te cont	rol (Dis	play)			
		-6	-5	-4	-3	-2	-1	±0	+1	+2	+3	+4	+5	+6
Setting	Cooling	18	19	20	21	22	23	24	25	26	27	28	29	30
temperature	Heating	18	19	20	21	22	23	24	25	26	27	28	29	30

(18) Protection control function

(a) Dew prevention control [Cooling]: Prevents dewing on the indoor unit.

(i) Operating conditions

When the following conditions have been satisfied for more than 30 minutes after starting operation.

- 1) Compressor's command speed is 28 rps or higher.
- 2) Detected value of humidity is 68% or higher.

(ii) Contents of operation

Air capacity control

Item	Model	SRK63ZR-W	SRK71ZR-W	SRK80ZR-W	
Upper limit of compressor's command speed (1)	Range A	Follow the table below			
Opper finnt of compressor's command speed	Range B	40rps	40rps	45rps	

Note (1) Ranges A and B are as shown below.

Condition for Range A

Range A Cancel 63 68 Humidity (%)

Compressor's command speed is controlled according to the indoor unit heat exchanger temperature (Th2) and the indoor unit room temperature (Th1).

Condition	Compressor's command speed
Th2 ≤ Th1-10	 Decreases the compressor's target max speed by 4 rps. If the condition is met still 20 seconds later, the speed is decreased further by 4 rps. This process is repeated further so far as the condition is met. (Lower limit is 30 rps.)
$Th1-10 < Th2 \le Th1-6$	Compressor's target max. speed or changed value of the same is maintained.
Th2-6 < Th1	Changed compressor's target max. speed is increased at a rate of 1 rps/20 seconds.

- 2) When this control has continued for more than 30 minutes continuously, the following wind direction control is performed.
 - a) When the vertical wind direction is set at other than the vertical swing, the flaps change to the horizontal position.
 - b) When the horizontal wind direction is set at other than the horizontal swing, the louver changes to the vertical position.

(iii) Reset conditions

When any of followings is satisfied.

- Compressor's command speed is less than 28 rps.
- Detected value of humidity is less than 63%.

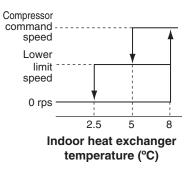

(b) Frost prevention control (During cooling or dehumidifying)

Operating conditions

- Indoor heat exchanger temperature (Th2) is lower than 5°C.
- 5 minutes after reaching the compressor command speed except 0 rps.

Detail of anti-frost operation (ii)

Indoor heat exchanger temperature	5°C or lower	2.5°C or lower
Lower limit of compressor command speed	22 rps (model SRK63 : 25rps)	0 rps
Indoor fan	Depends on operation mode	Protects the fan tap just before frost prevention control
Outdoor fan	Depends on command speed	Depends on stop mode
4-way valve	OFF	Depends on stop mode

Notes (1) When the indoor heat exchanger temperature is in the range of 2.5-5°C, the speed is reduced by 4 rps at each 20 seconds.

(2) When the temperature is lower than 2.5°C, the compressor is stopped.
 (3) When the indoor heat exchanger temperature is in the range of 5-8°C, the compressor command speed is been maintained.

(iii) **Reset conditions**

When either of the following condition is satisfied.

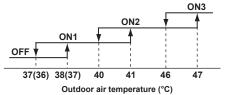

- 1) The indoor heat exchanger temperature (Th2) is 8°C or higher.
- 2) The compressor command speed is 0 rps.

(c) Cooling overload protective control

(i) Operating conditions:Reset conditions

When the outdoor air temperature (TH2) has become continuously for 30 seconds at 38(37)℃ or more, with the compressor running, the lower limit speed of compressor is brought up.

ltem Model	SRK63ZR-W				
Outdoor air temperature	38℃ or more	41°C or more	47°C or more		
Lower limit speed	25 rps	30 rps	40 rps		
Item Model	del SRK71, 80ZR-W				
iteiii					
Outdoor air temperature		41°C or more			

Note(1) Values in () are for the models 71, 80.

(ii) Detail of operation

The lower limit of compressor command speed is set to 25(30), 30(35) or 40 rps and even if the calculated result becomes lower than that after fuzzy calculation, the speed is kept to 25(30), 30(35) or 40 rps. However, when the thermo OFF, the speed is reduced to 0 rps.

(iii) Reset conditions

When either of the following condition is satisfied.

- 1) The outdoor air temperature is lower than 37(36) °C.
- 2) The compressor command speed is 0 rps.

(d) Cooling high pressure control

(i) Purpose

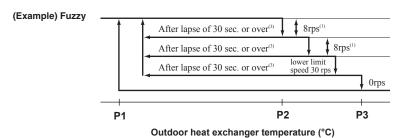

Prevents anomalous high pressure operation during cooling.

(ii) Detector

Outdoor heat exchanger temperature (TH1)

(iii) Detail of operation

Outdoor air temperature (°C)				

Notes(1) When the outdoor heat exchanger temperature is in the range of P2 -P3, the speed is reduced by 8 rps at each 20 seconds.

- (2) When the temperature is P3 or higher, the compressor is stopped.
- (3) When the outdoor heat exchanger temperature is in the range of P1 -P2, if the compressor command speed is been maintained and the operation has continued for more than 30 seconds at the same speed, it returns to the normal cooling operation.

(e) Cooling low outdoor air temperature protective control

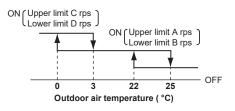

(i) Operating conditions

When the outdoor air temperature (TH2) is 22°C or lower continues for 20 seconds while the compressor command speed is other than 0 rps.

(ii) Detail of operation

- 1) The lower limit of the compressor command speed is set to B (D) rps and even if the speed becomes lower than 40 (30) rps, the speed is kept to 40 (30) rps. However, when the thermo OFF, the speed is reduced to 0 rps.
- 2) The upper limit of the compressor command speed is set to A (C) rps and even if the calculated result becomes higher than that after fuzzy calculation, the speed is kept to A (C) rps.

Note(1) Values in () are for outdoor air temperature is 0° C.

(g) Heating overload protective control

(i) Indoor unit side

1) Operating conditions

When the outdoor air temperature (TH2) is 17°C or higher continues for 30 seconds while the compressor command speed other than 0 rps.

2) Detail of operation

The indoor fan is stepped up by 1 speed step. (Upper limit 10th speed)

3) Reset conditions

The outdoor air temperature (TH2) is lower than 16°C.

(ii) Outdoor unit side

1) Operating conditions

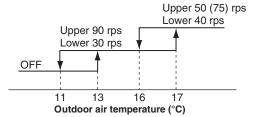

When the outdoor air temperature (TH2) is 13°C or 17°C or higher continues for 30 seconds while the compressor command speed other than 0 rps.

2) Detail of operation

- a) Taking the upper limit of compressor command speed range at 90 rps or 50 (75) rps, if the output speed obtained with the fuzzy calculation exceeds the upper limit, the upper limit value is maintained.
- b) The lower limit of compressor command speed is set to 30 rps or 40 rps and even if the calculated result becomes lower than that after fuzzy calculation, the speed is kept to 30 rps or 40 rps. However, when the thermo OFF, the speed is reduced to 0 prs.
- c) Inching prevention control is activated and inching prevention control is carried out with the minimum speed set at 30 rps or 40 rps.

3) Reset conditions

The outdoor air temperature (TH2) is lower than 11°C.

Note(1) Values in () are for the model SRK63.

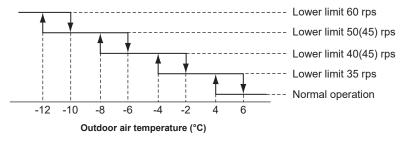

(h) Heating low outdoor temperature protective control

(i) Operating conditions

When the outdoor air temperature (TH2) is lower than 4°C or higher continues for 30 seconds while the compressor command speed is other than 0 rps.

(ii) Detail of operation

The lower limit compressor command speed is change as shown in the figure below.

Note(1) Values in () are for the model SRK63.

(iii) Reset conditions

When either of the following condition is satisfied.

- 1) The outdooe air temperature (TH2) becomes 6°C.
- 2) The compressor command speed is 0 rps.

(i) Compressor overheat protection

(Example) Fuzzy

(i) Purpose

It is designed to prevent deterioration of oil, burnout of motor coil and other trouble resulting from the compressor overheat.

(ii) Detail of operation

1) Speeds are controlled with temperature detected by the sensor (TH3) mounted on the discharge pipe.

After lapse of 180 second or over (3)

Lower limit (4)

0 rps

105

Discharge pipe temperature (*C)

Notes (1) When the discharge pipe temperature is in the range of 105-115°C, the speed is reduced by 4 rps.

- (2) When the discharge pipe temperature is raised and continues operation for 20 seconds without changing, then the speed is reduced again by 4 rps.
- (3) If the discharge pipe temperature is in the range of 95-105°C even when the compressor command speed is maintained for 180 second when the temperature is in the range of 95-105°C, the speed is raised by 1 rps and kept at that speed for 180 second. This process is repeated until the command speed is reached.
- (4) Lower limit speed

Model	em	Cooling	Heating
Lower limit speed		25 rps	32 rps

2) If the temperature of 115°C is detected by the sensor on the discharge pipe, then the compressor will stop immediately. When the discharge pipe temperature drops and the time delay of 3 minutes is over, the unit starts again within 1 hour but there is no start at the third time.

(j) Current safe

(i) Purpose

Current is controlled not to exceed the upper limit of the setting operation current.

(ii) Detail of operation

Input current to the converter is monitored with the current sensor fixed on the printed circuit board of the outdoor unit and, if the operation current value reaches the limiting current value, the compressor command speed is reduced. If the mechanism is actuated when the compressor command speed is less than 30 rps, the compressor is stopped immediately. Operation starts again after a delay time of 3 minutes.

(k) Current cut

(i) Purpose

Inverter is protected from overcurrent.

(ii) Detail of operation

Output current from the inverter is monitored with a shunt resistor and, if the current exceeds the setting value, the compressor is stopped immediately. Operation starts again after a delay time of 3 minutes.

(I) Outdoor unit failure

This is a function for determining when there is trouble with the outdoor unit during air-conditioning.

The compressor is stopped if any one of the following in item (i), (ii) is satisfied. Once the unit is stopped by this function, it is not restarted.

- (i) When the input current is measured at 1 A or less for 3 continuous minutes or more.
- (ii) If the outdoor unit sends a 0 rps signal to the indoor unit 3 times or more within 20 minutes of the power being turned on.

(m) Indoor fan motor protection

When the air-conditioner is operating and the indoor fan motor is turned ON, if the indoor fan motor has operated at 300 min⁻¹ or under for more than 30 seconds, the unit enters first in the stop mode and then stops the entire system.

(n) Serial signal transmission error protection

(i) Purpose

Prevents malfunction resulting from error on the indoor \leftrightarrow outdoor signals.

(ii) Detail of operation

If the compressor is operating and a serial signal cannot be received from the indoor control with outdoor control having serial signals continues for 7 minutes and 35 seconds, the compressor is stopped.

After the compressor has been stopped, it will be restarted after the compressor start delay if a serial signal can be received again from the indoor control.

(o) Rotor lock

If the motor for the compressor does not turn after it has been started, it is determined that a compressor lock has occurred and the compressor is stopped.

(p) Outdoor fan motor protection

If the outdoor fan motor has operated at 75 min⁻¹ or under for more than 30 seconds, the compressor and fan motor are stopped.

(q) Outdoor fan control at low outdoor temperature

(i) Cooling

1) Operating conditions

When the outdoor air temperature (TH2) is 22°C or lower continues for 30 seconds while the compressor command speed is other than 0 rps.

2) Detail of operation

After the outdoor fan operates at A speed for 60 seconds; the corresponding outdoor heat exchanger temperature shall implement the following controls.

Value of A

	Outdoor fan
Outdoor temperature > 10(0)°C	2nd speed
Outdoor temperature ≤ 10(0)°C	1st speed

Note (1) Values in () are for the model SRK63.

a) Outdoor heat exchanger temperature (TH1) ≤ 22°C

After the outdoor fan speed drops (down) to 1 speed for 60 seconds; if the outdoor heat exchanger temperature is lower than 22°C, gradually reduce the outdoor fan speed by 1 speed.

Lower limit fan speed

	Outdoor fan
Outdoor temperature > 16(0)°C	2nd speed
Outdoor temperature ≤ 16(0)°C	1st speed

b) 22°C < Outdoor heat exchanger temperature (TH1) ≤ 40°C

After the outdoor fan speed maintains at A speed for 20 seconds; if the outdoor heat exchanger temperature is 22°C - 40°C, maintain outdoor fan speed.

c) Outdoor heat exchanger tempeature (TH1) > 40°C

After the outdoor fan speed rises (up) to 1 speed for 60 seconds; if the outdoor heat exchanger temperature is higher than 40° C, gradually increase outdoor fan speed by 1 speed. (Upper limit 3rd speed)

3) Reset conditions

When either of the following conditions is satisfied.

- a) The outdoor air temperature (TH2) is 24°C or higher.
- b) The compressor command speed is 0 rps.

(ii) Heating

1) Operating conditions

When the outdoor air temperature (TH2) is 5° C (model $63:3^{\circ}$ C) or lower continues for 30 seconds while the compressor command speed is other than 0 rps.

2) Detail of operation

The outdoor fan is stepped up by 2 speed step at each 20 seconds. (Upper limit 8th (model71:7th) speed)

3) Reset conditions

When either of the following conditions is satisfied.

- a) The outdoor air temperature (TH2) is 5°C (model 63 : 3°C) or higher.
- b) The compressor command speed is 0 rps.

(r) Outdoor fan control at overload conditions.

(i) Cooling

1) Operating conditions

When the outdoor air temperature (TH2) is 41° C(model $63:38^{\circ}$ C) or higher continues for 30 seconds while the compressor ON.

2) Detail of operation

The outdoor fan is stepped up by 3 speed step. (Upper limit 8th speed).

3) Reset conditions

When either of the fllowing conditions is satisfied.

- a) The outdoor air temperature (TH2) is 40°C (model 63:37°C) or lower.
- b) The compressor command speed 0 rps.

(ii) Heating

1) Operating conditions

When the outdoor heat exchaner temperature (TH1) is 13° C or higher continues for 30 seconds while the compressor ON.

2) Detail of operation

The outdoor fan is lowered by 3 speed step. (Lower limit 2nd speed).

3) Reset conditions

When either of the fllowing conditions is satisfied.

- a) The outdoor heat exchaner temperature (TH1) is 10° C or lower.
- b) The compressor command speed 0 rps.

(s) Refrigeration cycle system protection

(i) Starting conditions

- 1) When A minutes have elapsed after the compressor ON or the completion of the defrost operation
- 2) Other than the defrost operation
- 3) When, after satisfying the conditions of 1) and 2) above, the compressor speed, indoor air temperature (Th1) and indoor heat exchanger temperature (Th2) have satisfied the conditions in the following table for B minutes:

Operation mode A		Compressor speed (N)	Room temperature (Th1)	Room temperature (Th1)/ Indoor heat exchanger temperature (Th2)	В	С	
		(A)	(Compressor speed (N))				
Cooling	Model 63	3	40≦N (TH2≧0°C)	10 < Th 1 < 40	This dethics	3	1
Cooling Model 63)	40≦N (TH2<0°C)	$10 \leq \text{Th} 1 \leq 40$	Th1-4 <th2< td=""><td rowspan="2"></td><td>4</td></th2<>		4	
	Model 71, 80		40≦N				1
Heating ⁽¹⁾	Model 63	8	40≦N (TH2≧0°C) 60≦N (TH2<0°C)	0≦Th1≦40	Th2 <th1+6< td=""><td>5</td><td>2</td></th1+6<>	5	2
	Model 71, 80	5	40≦N				

Note (1) Except that the fan speed is HI in heating operation and silent mode control.

(ii) Contents of control

- 1) When the conditions of (i) above are met, the compressor stops.
- 2) Error stop occurs when the compressor has stopped C times within 60 minutes.

(iii) Reset condition

When the compressor has been turned OFF

(t) Service valve (gas side) closing operation

(i) Starting conditions

1) Operation mode: Heating

2) Compressor conditions : OFF \rightarrow ON

(ii) Contents control

If the output current of inverter exceeds the specifications, it makes the compressor stopping.

(iii) Anomalous stop control

If the inverter output current value exceeds the setting value within 80 seconds the compressor stops.

10. MAINTENANCE DATA

(1) Cautions

- (a) If you are disassembling and checking an air-conditioner, be sure to turn off the power before beginning. When working on indoor units, let the unit sit for about 1 minute after turning off the power before you begin work. When working on an outdoor unit, there may be an electrical charge applied to the main circuit (electrolytic condenser), so begin work only after discharging this electrical charge (to DC10V or lower).
- (b) When taking out printed circuit boards, be sure to do so without exerting force on the circuit boards or package components.
- (c) When disconnecting and connecting connectors, take hold of the connector housing and do not pull on the lead wires.

(2) Items to check before troubleshooting

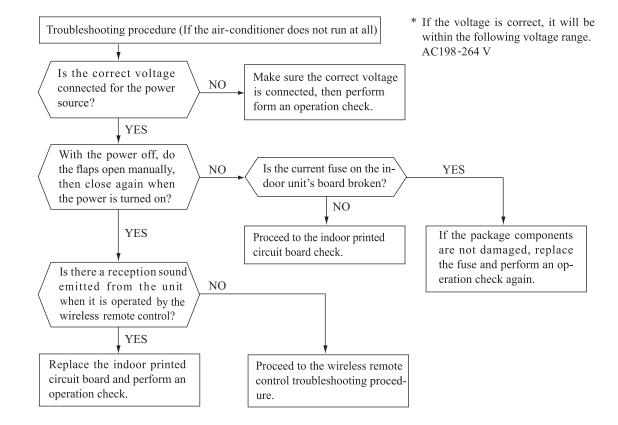

- (a) Have you thoroughly investigated the details of the trouble which the customer is complaining about?
- (b) Is the air-conditioner running? Is it displaying any self-diagnosis information?
- (c) Is a power source with the correct voltage connected?
- (d) Are the control lines connecting the indoor and outdoor units wired correctly and connected securely?
- (e) Is the outdoor unit's service valve open?

(3) Troubleshooting procedure (If the air-conditioner does not run at all)

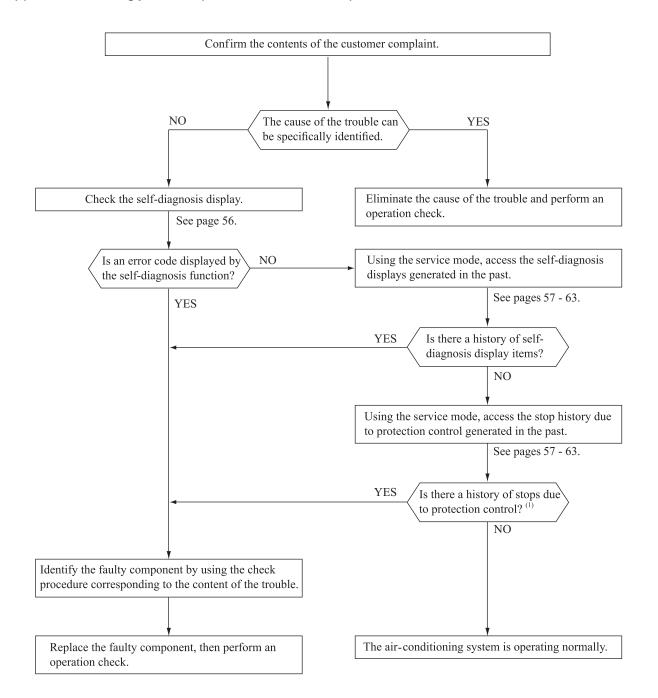

If the air-conditioner does not run at all, diagnose the trouble using the following troubleshooting procedure. If the air-conditioner is running but breaks down, proceed to troubleshooting step (4).

Important When all the following conditions are satisfied, we say that the air-conditioner will not run at all.

- (a) The RUN light does not light up.
- (b) The flaps do not open.
- (c) The indoor unit fan motors do not run.
- (d) The self-diagnosis display does not function.

(4) Troubleshooting procedure (If the air-conditioner runs)

Note (1) Even in cases where only intermittent stop data are generated, the air-conditioning system is normal. However, if the same protective operation recurs repeatedly (3 or more times), it will lead to customer complaints. Judge the conditions in comparison with the contents of the complaints.

(5) Self-diagnosis table

When this air-conditioner performs an emergency stop, the reason why the emergency stop occurred is displayed by the flashing of display lights. If the air-conditioner is operated using the remote control 3 minutes or more after the emergency stop, the trouble display stops and the air-conditioner resumes operation. (1)

lisnlav nanel	Wired (2)					
TIMER control of tro			Cause	Display (flashing) condition		
light ON	display	Heat exchanger sensor 1 error	Broken heat exchanger sensor 1 wire, poor connector connection Ladow DCD in faults:	When a heat exchanger sensor 1 wire disconnection is detected while operation is stopped. (If a temperature of –28°C or lower is detected for 15 seconds, it is judged that the wire is disconnected.)		
ON	_	Room temperature sensor error	Broken room temperature sensor wire, poor connector connection Indoor PCB is faulty	(Not displayed during operation.) Notes (1) The air-conditioner cannot be restarted using the remote control for 3 minutes after operation stops.

(2) The wired remote control is option parts.

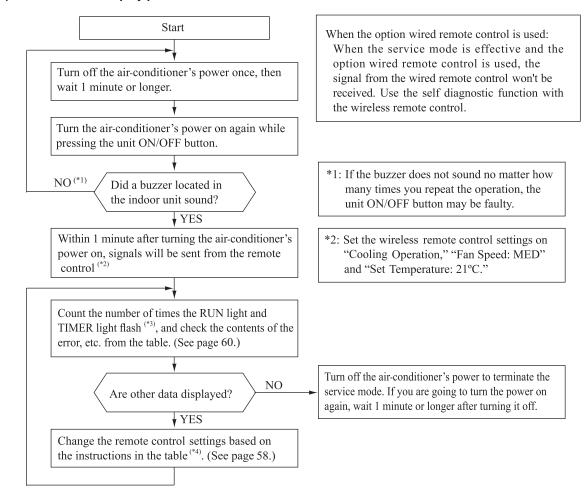

(6) Service mode (Trouble mode access function)

This air-conditioner is capable of recording error displays and protective stops (service data) which have occurred in the past. If self-diagnosis displays cannot be confirmed, it is possible to get a grasp of the conditions at the time trouble occurred by checking these service data.

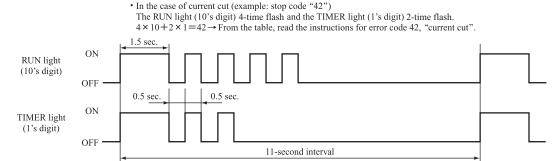

(a) Explanation of terms

Term	Explanation
Service mode	The service mode is the mode where service data are displayed by flashing of the display lights when the operations in item (b) below are performed with the indoor controller.
Service data	These are the contents of error displays and protective stops which occurred in the past in the air-conditioner system. Error display contents and protective stop data from past anomalous operations of the air-conditioner system are saved in the indoor unit control's non-volatile memory (memory which is not erased when the power goes off). There are two types of data, self-diagnosis data and stop data, described below.
Self-diagnosis data	These are the data which display the reason why a stop occurred when an error display(self-diagnosis display) occurred in an indoor unit. Data are recorded for up to 5 previous occurrences. Data which are older than the 5th previous occurrence are erased. In addition, data on the temperature of each sensor (room temperature, indoor heat exchanger, outdoor heat exchanger, outdoor heat exchanger, outdoor air temperature, discharge pipe), remote control information (operation switching, fan speed switching) are recorded when trouble occurs, so more detailed information can be checked.
Stop data	These are the data which display the reason by a stop occurred when the air-conditioning system performed protective stops, etc. in the past. Even if stop data alone are generated, the system restarts automatically. (After executing the stop mode while the display is normal, the system restarts automatically.) Data for up to 10 previous occasions are stored. Data older than the 10th previous occasion are erased. (Important) In cases where transient stop data only are generated, the air-conditioner system may still be normal. However, if the same protective stop occurs frequently (3 or more times), it could lead to customer complaints.

(b) Service mode display procedure

*3: To count the number of flashes in the service mode, count the number of flashes after the light lights up for 1.5 second initially (start signal). (The time that the light lights up for 1.5 second (start signal) is not counted in the number of flashes.)

*4: When in the service mode, when the wireless remote control settings (operation mode, fan speed mode, temperature setting) are set as shown in the following table and sent to the air-conditioner unit, the unit switches to display of service data.

(i) Self-diagnosis data

What are Self-diagnosis Data?

These are control data (reasons for stops, temperature at each sensor, wireless remote control information) from the time when there were error displays (a bnormal stops) in the indoor unit in the past.

Data from up to 5 previous occasions are stored in memory. Data older than the 5th previous occasion are erased.

The temperature setting indicates how many occasions previous to the present setting the error display data are and the operation mode and fan speed mode data show the type of data.

Wireless remote control setting		Contents of entruit data	
Operation mode	Fan speed mode	Contents of output data	
	MED	Displays the reason for stopping display in the past (error code).	
Cooling	HI	Displays the room temperature sensor temperature at the time the error code was displayed in the past.	
AUTO		Displays the indoor heat exchanger sensor temperature at the time the error code was displayed in the past.	
	LO	Displays the wireless remote control information at the time the error code was displayed in the past.	
Haatina	MED	Displays the outdoor air temperature sensor temperature at the time the error code was displayed in the past.	
Heating HI AUTO		Displays the outdoor heat exchanger sensor temperature at the time the error code was displayed in the past.	
		Displays the discharge pipe sensor temperature at the time the error code was displayed in the past.	

Wireless remote control setting	Indicates the number of occasions previous to the present the error display data are from.				
Temperature setting					
21°C	1 time previous (previous time)				
22°C	2 times previous				
23°C	3 times previous				
24°C	4 times previous				
25°C	5 times previous				

Only for indoor heat exchanger sensor 2

Wireless remote control setting	Indicates the number of occasions previous to the present the error display data are from.				
Temperature setting					
26°C	1 time previous (previous time)				
27°C	2 times previous				
28°C	3 times previous				
29°C	4 times previous				
30°C	5 times previous				

(Example)

Wireless	remote contr	ol setting	
Operation mode	Fan speed mode	Temperature setting	Displayed data
		21°C	Displays the reason for the stop (error code) the previous time an error was displayed.
		22°C	Displays the reason for the stop (error code) 2 times previous when an error was displayed.
Cooling MED		Cooling MED 23°C Displays the reason for the stop (error code) 3 times previous	
		24°C	Displays the reason for the stop (error code) 4 times previous when an error was displayed.
		25°C	Displays the reason for the stop (error code) 5 times previous when an error was displayed.

(ii) Stop data

Wireless remote control setting		ol setting	
Operation mode	Fan speed mode	Temperature setting	Displayed data
		21°C	Displays the reason for the stop (stop code) the previous time when the air-conditioner was stopped by protective stop control.
		22°C	Displays the reason for the stop (stop code) 2 times previous when the air-conditioner was stopped by protective stop control.
	LO	23°C	Displays the reason for the stop (stop code) 3 times previous when the air-conditioner was stopped by protective stop control.
		24°C	Displays the reason for the stop (stop code) 4 times previous when the air-conditioner was stopped by protective stop control.
Cooling		25°C	Displays the reason for the stop (stop code) 5 times previous when the air-conditioner was stopped by protective stop control.
Coomig		26°C	Displays the reason for the stop (stop code) 6 times previous when the air-conditioner was stopped by protective stop control.
		27°C	Displays the reason for the stop (stop code) 7 times previous when the air-conditioner was stopped by protective stop control.
		28°C	Displays the reason for the stop (stop code) 8 times previous when the air-conditioner was stopped by protective stop control.
		29°C	Displays the reason for the stop (stop code) 9 times previous when the air-conditioner was stopped by protective stop control.
		30°C	Displays the reason for the stop (stop code) 10 times previous when the air-conditioner was stopped by protective stop control.

(c) Error code, stop code table (Assignment of error codes and stop codes is done in common for all models.)

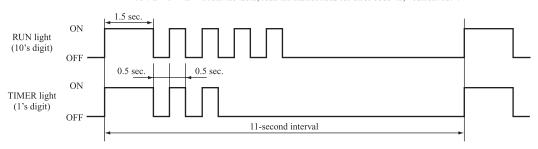

service RUN light	shes when in mode TIMER light (1's digit)	Stop coad or Error coad	Error content	Cause	Occurrence conditions		Auto
OFF	OFF 1-time flash	0	Normal Error of wired remote control wiring	Broken wired remote control wire, defective indoor PCB	The wired remote control wire Y is open. The wired remote control wires X and Y are reversely connected. Noise is penetrating the wired remote control lines. The wired remote control or indoor PCB is faulty.	_	0
	5-time flash	05	Can not receive signals for 35 seconds (if communications have recovered)	Power source is faulty. Power source cables and signal lines are improperly wired. Indoor or outdoor PCB are faulty.	When 35 seconds passes without communications signals from either the outdoor unit or the indoor unit being detected correctly.		_
	5-time flash	35	Cooling high pressure control	Cooling overload operation. Outdoor unit fan speed drops. Outdoor heat exchanger sensor is short circuit.	When the outdoor heat exchanger sensor's value exceeds the set value.	(5 times)	0
	6-time flash	36	Compressor overheat 115°C	Refrigerant is insufficient. Discharge pipe sensor is faulty. Service valve is closed.	When the discharge pipe sensor's value exceeds the set value.	(2 times)	0
3-time flash	7-time flash	37	Outdoor heat exchanger sensor is abnormal	Outdoor heat exchanger sensor wire is disconnected. Connector connections are poor. Outdoor PCB is faulty.	-55°C or lower is detected for 5 seconds continuously 3 times within 40 minutes after intial detection of this anomalous temperature. Or-55°C lower is detected for 5 seconds continuously within 20 seconds after power ON.	(3 times)	0
	8-time flash	38	Outdoor air temperature sensor is abnormal	Outdoor air temperature sensor wire is disconnected. Connector connections are poor. Outdoor PCB is faulty.	-55°C or lower is detected for 5 seconds continuously 3 times within 40 minutes after intial detection of this anomalous temperature. Or-55°C lower is detected for 5 seconds continuously within 20 seconds after power ON.	(3 times)	0
	9-time flash	39	Discharge pipe sensor is abnormal (anomalous stop)	Discharge pipe sensor wire is disconnected. Connector connections are poor. Outdoor PCB is faulty.	-25°C or lower is detected for 5 seconds continuously 3 times within 40 minutes after intial detection of this anomalous temperature.	(3 times)	0
	OFF	40	Service valve (gas side) closed operation	Service valve (gas side) closed Outdoor PCB is faulty.	If the inverter output current value exceeds the setting value within 80 seconds after the compressor ON in the heating mode, the compressor stops.	(2 times)	0
4-time flash	2-time flash	42	Current cut	Compressor lock. Compressor wiring short circuit. Compressor output is open phase. Outdoor PCB is faulty. Service valve is closed. Electronic expansion valve is faulty. Compressor is faulty.	Compressor start fails 42 times in succession and the reason for the final failure is current cut.	(2 times)	0
	7-time flash	47	Circuit error	Defective circuit	When L1 cable or L2 cable disconnect. When the outdoor PCB is faulty.	0	_
	8-time flash	48	Outdoor unit's fan motor is abnormal	Outdoor fan motor is faulty. Connector connections are poor. Outdoor PCB is faulty.	When a fan speed of 75 min ⁻¹ or lower continues for 30 seconds or longer.	(3 times)	0
	1-time flash	51	Short circuit in the power transistor (high side) Current cut circuit breakdown	Outdoor PCB is faulty. Power transistor is damaged.	When it is judged that the power transistor was damaged at the time the compressor started.	0	_
	7-time flash	57	Refrigeration cycle system protective control	Service valve is closed. Refrigerant is insufficient.	When refrigeration cycle system protective control operates.	(3 times)	0
5-time flash	8-time flash	58	Current safe	Refrigerant is overcharge. Compressor lock. Overload operation.	When there is a current safe stop during operation.	_	0
	9-time flash	59	Compressor wiring is unconnection voltage drop Low speed protective control	Compressor wiring is disconnected. Power transistor is damaged. Power source construction is defective. Outdoor PCB is faulty. Compressor is faulty.	When the current is 1A or less at the time the compressor started. When the power source voltage drops during operation. When the compressor command speed is 1 ower than 32 rps for 60 minutes.	0	0
	OFF	60	Rotor lock	Compressor is faulty. Compressor output is open phase. Electronic expansion valve is faulty. Overload operation. Outdoor PCB is faulty.	After the compressor starts, when the compressor stops due to rotor lock.	(2 times)	0
6-time flash	1-time flash	61	Connection lines between the indoor and outdoor units are faulty	Connection lines are faulty. Indoor or outdoor PCB are faulty.	When 10 seconds passes after the power is turned on without communications signals from the indoor or outdoor unit being detected correctly.	0	_
	2-time flash	62	Serial transmission error	Indoor or outdoor PCB are faulty. Noise is causing faulty operation.	When 7 minute 35 seconds passes without communications signals from either the outdoor unit or the indoor unit being detected correctly.	0	_
	OFF	80	Indoor unit's fan motor is abnormal	Indoor fan motor is faulty. Connector connections are poor. Indoor PCB is faulty.	When the indoor unit's fan motor is detected to be running at 300 min ⁻¹ or lower speed with the fan motor in the ON condition while the air-conditioner is running.	0	_
	2-time flash	82	Indoor heat exchanger sensor is abnormal (anomalous stop)	Indoor heat exchanger sensor wire is disconnected. Connector connections are poor.	When a temperature of -28°C or lower is sensed continuously for 40 minutes during heating operation. (the compressor stops).	0	
8-time flash	4-time flash	84	Anti-condensation control	High humidity condition. Humidity sensor is faulty.	Anti-condensation prevention control is operating.	_	0
	5-time flash	85	Anti-frost control	Indoor unit fan speed drops. Indoor heat exchanger sensor is broken wire.	When the anti-frost control operates and the compressor stops during cooling operation.	_	0
	6-time flash	86	Heating high pressure control	Heating overload operation. Indoor unit fan speed drops. Indoor heat exchanger sensor is short circuit.	When high pressure control operates during heating operation and the compressor stops.	_	0

Notes (1) The number of flashes when in the service mode do not include the 1.5 second period when the lights light up at first (start signal). (See the example shown below.)

• In the case of current cut (example: stop code "42")

The RUN light (10's digit) 4-time flash and the TIMER light (1's digit) 2-time flash.

4 × 10+2 × 1=42 → From the table, read the instructions for error code 42, "current cut".

(2) Error display:
— Is not displayed. (automatic recovery only)

O Displayed.

If there is a () displayed, the error display shows the number of times that an auto recovery occurred for the same reason has

reached the number of times in ().

If no () is displayed, the error display shows that the trouble has occurred once.

(3) Auto Recovery: — Does not occur

Does not occur○ Auto recovery occurs.

(d) Operation mode, Fan speed mode information tables

(i) Operation mode

Display pattern when in service mode	Operation mode when there is an abnormal stop				
RUN light (10's digit)					
_	AUTO				
1-time flash	DRY				
2-time flash	COOL				
3-time flash	FAN				
4-time flash	HEAT				

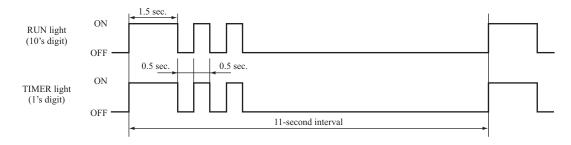

(ii) Fan speed mode

Display pattern when in service mode	Fan speed mode when				
TIMER light (1's digit)	there is an abnormal stop				
_	AUTO				
2-time flash	HI				
3-time flash	MED				
4-time flash	LO				
5-time flash	ULO				
6-time flash	HI POWER				
7-time flash	ECONO				

^{*} If no data are recorded (error code is normal), the information display in the operation mode and fan speed mode becomes as follows.

Mode	Display when error code is normal.					
Operation mode	AUTO					
Fan speed mode	AUTO					

(Example): Operation mode: COOL, Fan speed mode: HI

(e) Temperatare information

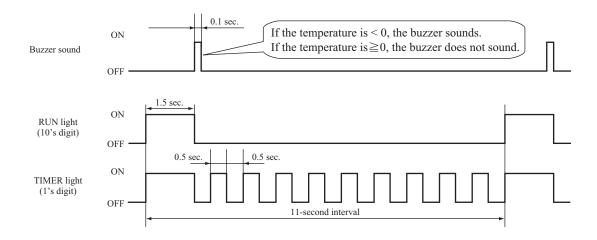

(i) Room temperature sensor, indoor heat exchanger sensor, outdoor air temperature sensor, outdoor heat exchanger sensor temperature

										U	nit: °C
RUN lig (10's di	TIMER light (1's digit) pht git)	0	1	2	3	4	5	6	7	8	9
	6	-60	-61	-62	-63	-64					
	5	-50	-51	-52	-53	-54	-55	-56	-57	-58	-59
	4	-40	-41	-42	-43	-44	-45	-46	-47	-48	-49

No	4	40	41	42	43	44	45	46	47	48	49
(does not sound)	5	50	51	52	53	54	55	56	57	58	59
	6	60	61	62	63	64	65	66	67	68	69
	7	70	71	72	73	74	75	76	77	78	79
	8	80	81	82	83	84	85	86	87	88	89
	9	90	91	92	93	94	95	96	97	98	99

^{*} If no data are recorded (error code is normal), the display for each temperature information becomes as shown below.

Sensor name	Sensor value displayed when the error code is normal
Room temperature sensor	-64°C
Indoor heat exchanger sensor	-64°C
Outdoor air temperature sensor	-64°C
Outdoor heat exchanger sensor	-64°C

(Example) Outdoor heat exchanger temperature data: "-9°C"

(ii) Discharge pipe sensor temperature

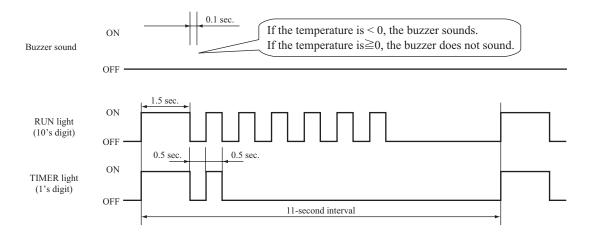

Unit: °C TIMER light (1's digit) RUN light (10's digit) **Buzzer sound** -60 -62 -64 -40 -42 -44 -46 -48 -50 -52 -54 -56 -58 Yes (sounds for 0.1 second) -20 -22 -28 -30 -32 -34 -24 -26 -36 -38 -2 -8 -10 -12 -14 -16 -18 -4 -6 No (does not sound)

* If no data are recorded (error code is normal), the display for each temperature information becomes as shown below.

Sensor name	Sensor value displayed when the error code is normal					
Discharge pipe sensor	-64°C					

(Example) Discharge pipe temperature data: "122°C"

* In the case of discharge pipe data, multiply the reading value by 2. (Below, $61 \times 2 = "122°C"$)

Judgment			·					Examiner
Remarks							!	1

Note (1) In the case of indoor heat exchanger sensor 2, match from 26 to 30 the temperature setting of wireless remote control. (Refor to page 58)

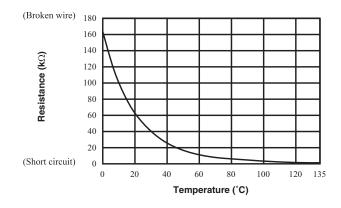

(7) Inspection procedures corresponding to detail of trouble

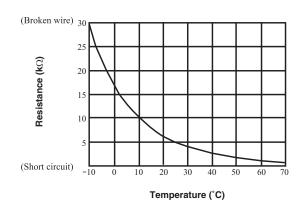

Sensor error

Broken sensor wire, connector poor connection

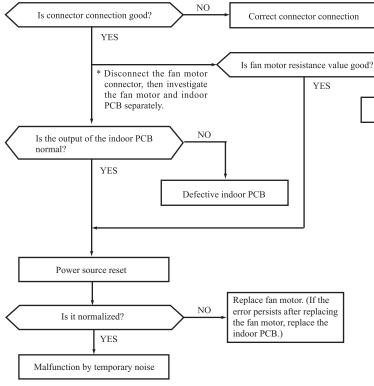

- ◆ Discharge pipe sensor temperature characteristics
- Sensor temperature characteristics (Room temp., indoor heat exchanger temp., outdoor heat exchanger temp., outdoor air temp.)

Indoor fan motor error

Defective fan motor, connector poor connection, defective indoor PCB

Notes (1) See pages 71 for the fan motor and indoor PCB check procedure.

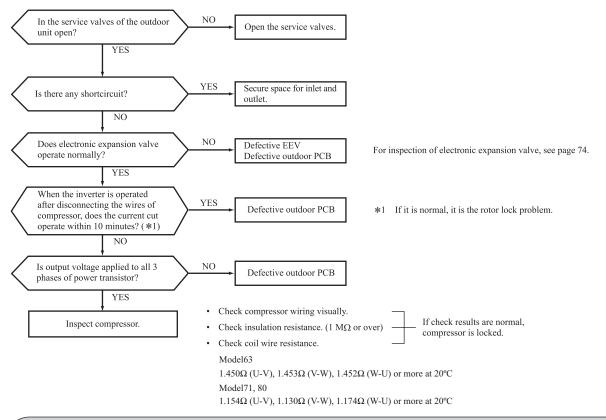

NO

Replace indoor fan motor

- (2) After making sure the fan motor and indoor PCB are normal, connect the connectors and confirm that the fan motor is turning.
 - (If power is turned on while one or the other is broken down, it could cause the other to break down also.)

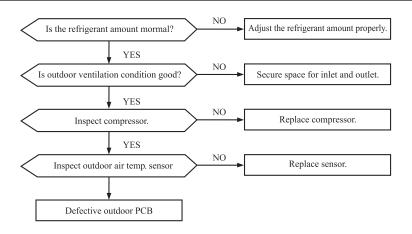

Current cut

Compressor lock, Compressor wiring short circuit, Compressor output is open phase, Outdoor PCB is faulty, Service valve is closed, EEV is faulty, Compressor faulty.

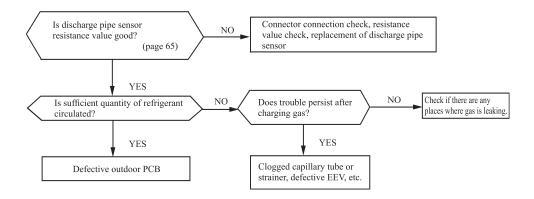

Current safe stop

Overload operation, compressor lock, overcharge

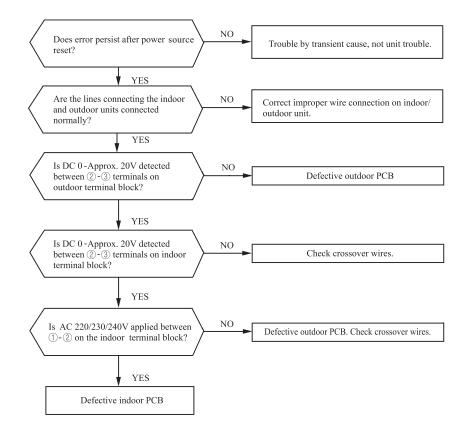

Over heat of compressor

Gas shortage, defective discharge pipe sensor

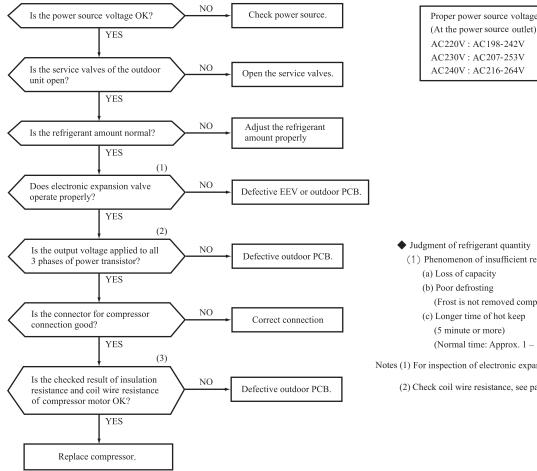

Error of signal transmission

Wiring error including power cable, defective indoor/ outdoor PCB

Trouble of outdoor unit

Insufficient refregerant amount, Faulty power transistor, Broken compressor wire Service valve close, Defective EEV, Defective outdoor PCB

Proper power source voltages are as follows.

AC220V: AC198-242V AC230V: AC207-253V AC240V : AC216-264V

- (1) Phenomenon of insufficient refrigerant
 - (Frost is not removed completely.)

(Normal time: Approx. 1-1 minute and 30 seconds)

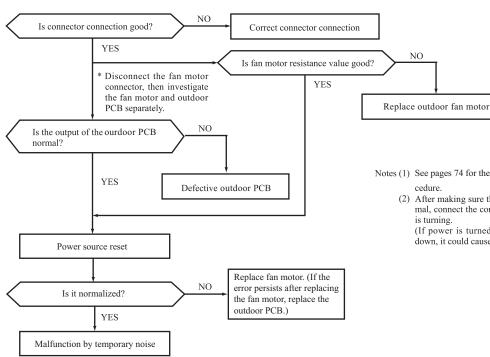

Notes (1) For inspection of electronic expansion valve, see page 74.

(2) Check coil wire resistance, see page 66.

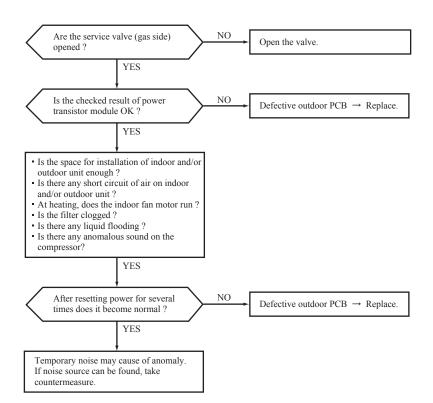

NO

Outdoor fan motor error

Defective fan motor, connector poor L connection, defective outdoor PCB

- Notes (1) See pages 74 for the fan motor and outdoor PCB check pro-
 - (2) After making sure the fan motor and outdoor PCB are normal, connect the connectors and confirm that the fan motor
 - (If power is turned on while one or the other is broken down, it could cause the other to break down also.)

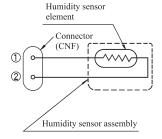

(8) Phenomenon observed after shortcircuit, wire breakage on sensor

(a) Indoor unit

Sensor	Operation mode	Phenomenon	
		Shortcircuit	Disconnected wire
Room temperature sensor	Cooling	Release of continuous compressor operation command.	Continuous compressor operation command is not released.
	Heating	Continuous compressor operation command is not released.	Release of continuous compressor operation command.
Heat exchanger sensor	Cooling	Freezing cycle system protection trips and stops the compressor.	Continuous compressor operation command is not released. (Anti-frosting)
	Heating	High pressure control mode (Compressor stop command)	Hot keep (Indoor fan stop)
Humidity sensor	Cooling	Refer to the table below.	Refer to the table below.
	Heating	Normal system operation is possible.	

Humidity sensor operation

Failure mode		Control input circuit resding	Air-conditioning system operation	
cted	① Disconnected wire			
Disconnected wire	② Disconnected wire	Humidity reading is 0%	Anti-condensation control is not done.	
	12 Disconnected wire			
Short	① and ② are shot circuited	Humidity reading is 100%	Anti-condensation control keep doing.	

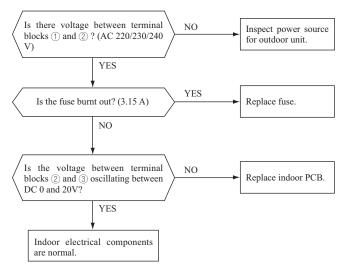

Remark: Do not perform a continuity check of the humidity sensor with a tester. If DC current is applied, it could damage the sensor.

(b) Outdoor unit

Sensor	Operation mode	Phenomenon	
		Shortcircuit	Disconnected wire
Hart a share a	Cooling	Compressor stop.	Compressor stop.
Heat exchanger sensor	Heating	Defrost operation is not performed.	Defrost operation is performed for 10 minutes at approx. 35 minutes.
Ourdoor air	Cooling	The compressor cannot pick up its speed owing to the current safe so that the designed capacity is not achieved.	Compressor stop.
temperature sensor	Heating	The compressor cannot pick up its speed owing to the heating overload protection so that the designed capacity is not achieved.	Defrost operation is performed for 10 minutes at approx. 35 minutes.
Discharge pipe sensor	All modes	Compressor overload protection is disabled. (Can be operated.)	Compressor stop.

(9) Checking the indoor electrical equipment

(a) Indoor PCB check procedure

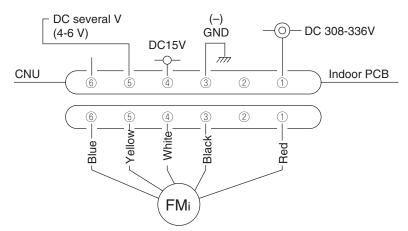

(b) Indoor unit fan motor check procedure

This is a diagnostic procedure for determining if the indoor unit's fan motor or the indoor PCB is broken down.

(i) Indoor PCB output check

- 1) Turn off the power.
- 2) Remove the front panel, then disconnect the fan motor lead wire connector.
- 3) Turn on the power. If the unit operates when the ON/OFF button is pressed, if trouble is detected after the voltages in the following figure are output for approximately 30 seconds, it means that the indoor PCB is normal and the fan motor is broken down.

If the voltages in the following figure are not output at connector pins No. ①, ④ and ⑤, the indoor PCB has failed and the fan motor is normal.

Measuring point	Voltage range when normal
1 - 3	DC308-336V
4 - 3	DC15V
5 - 3	DC several V (4-6V)

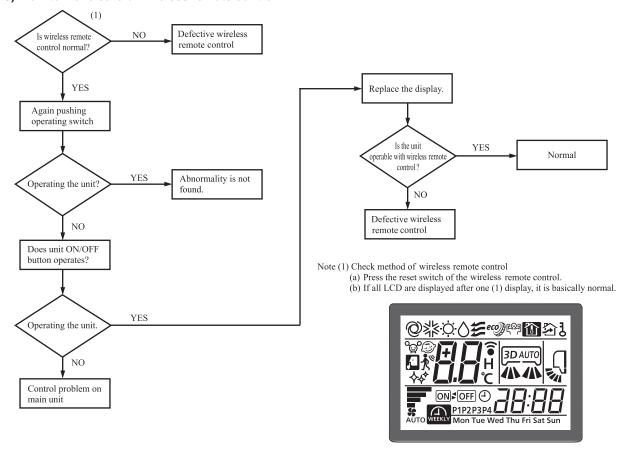

(ii) Fan motor resistance check

Measuring point	Resistance when normal
① - ③ (Red - Black)	$20\mathrm{M}\Omega$ or higher
4 - 3 (White - Black)	20 k Ω or higher

Notes (1) Remove the fan motor and measure it without power connected to it.

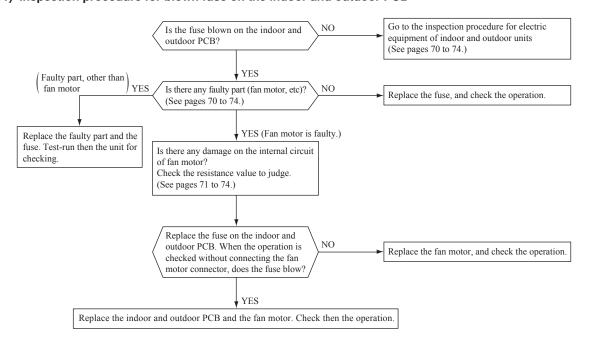

(2) If the measured value is below the value when the motor is normal, it means that the fan motor is faulty.

(10) How to make sure of wireless remote control

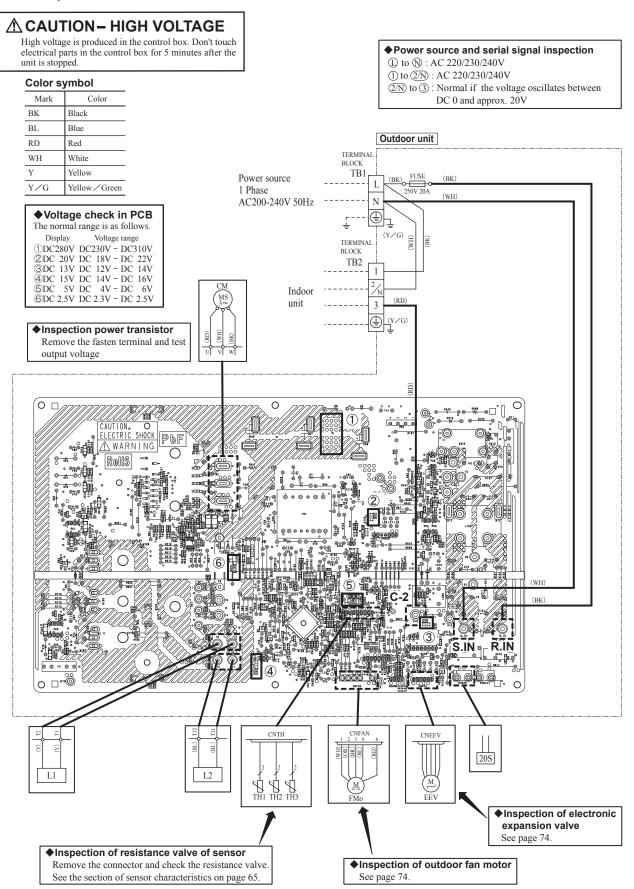

Simplified check methd of wireless remote control It is normal if the signal transmission section of the wireless remote control emits a whitish light at each transmission on the monitor of digital camera.

(11) Inspection procedure for blown fuse on the indoor and outdoor PCB

(12) Outdoor unit inspection points Models SRC63ZR-W, 71ZR-W, 80ZR-W

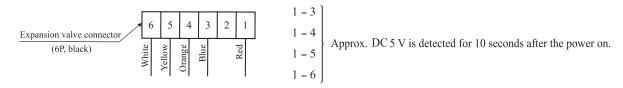

♦Check point of outdoor unit

(a) Inspection of electronic expansion valve

Electronic expansion valve operates for approx. 10 seconds after the power on, in order to determine its aperture. Check the operating sound and voltage during the period of time. (Voltage cannot be checked during operation in which only the aperture change occurs.)

- (i) If it is heard the sound of operating electronic expansion valve, it is almost normal.
- (ii) If the operating sound is not heard, check the output voltage.

- (iii) If voltage is detected, the outdoor PCB is normal.
- (iv) If the expansion valve does not operate (no operating sound) while voltage is detected, the expansion valve is defective.

• Inspection of electronic expansion valve as a separate unit

Measure the resistance between terminals with an analog tester.

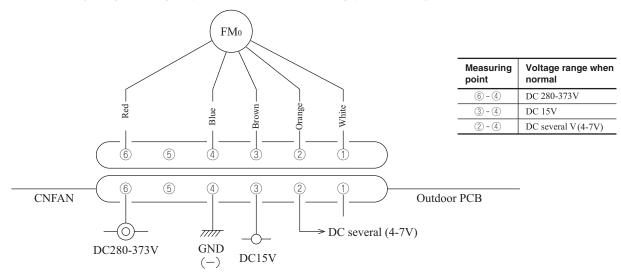

Measuring point	Resistance when normal
1-6	
1-5	$46\pm4\Omega$
1-4	(at 20°C)
1-3	

(b) Outdoor unit fan motor check procedure

- When the outdoor unit fan motor error is detected, diagnose which of the outdoor unit fan motor or outdoor PCB is defective.
- Diagnose this only after confirming that the indoor unit is normal.
- (i) Outdoor PCB output check
 - 1) Turn off the power.
 - 2) Disconnect the outdoor unit fan motor connector CNFAN.
 - 3) When the indoor unit is operated by inserting the power source plug and pressing (ON) the backup switch for more than 5 seconds, if the voltage of pin No. ② in the following figure is output for 30 seconds at 20 seconds after turning "ON" the backup switch, the outdoor PCB is normal but the fan motor is defective.

If the voltage is not detected, the outdoor PCB is defective but the fan motor is normal.

Note (1) The voltage is output 3 times repeatedly. If it is not detected, the indoor unit displays the error message.

(ii) Fan motor resistance check

Measuring point	Resistance when normal
6 - 4 (Red - Blue)	20 MΩ or higher
③ - ④ (White - Blue)	20 k Ω or higher

Notes (1) Remove the fan motor and measure it without power connected to it.

(2) If the measured value is below the value when the motor is normal, it means that the fan motor is faulty.

11. OPTION PARTS

PJZ012A171

(1) Wired remote control (a) Model RC-EX3A

1. Safety precautions

Please read this manual carefully before starting installation work to install the unit properly. Every one of the followings is important information to be observed strictly.

∕ :\WARNING	Failure to follow these instructions properly may result in serious
Z:ZWARINING	consequences such as death, severe injury, etc.
∴ CAUTION	Failure to follow these instructions properly may cause injury or property
Z:NOAOTION	damage.

It could have serious consequences depending on the circumstances.

The following pictograms are used in the text.

Keep this manual at a safe place where you can consult with whenever necessary. Show this manual to installers when moving or repairing the unit. When the ownership of the unit is transferred, this manual should be given to a new owner.

MARNING

- Consult your dealer or a professional contractor to install the unit.

 Improper installation made on your own may cause electric shocks, fire or dropping of the unit.
- Installation work should be performed properly according to this installation manual.

Improper installation work may result in electric shocks, fire or break-down.

- Be sure to use accessories and specified parts for installation work.
 Use of unspecified parts may result in drop, fire or electric shocks.
- Install the unit properly to a place with sufficient strength to hold the weight.

If the place is not strong enough, the unit may drop and cause injury.

Be sure to have the electrical wiring work done by qualified electrical installer, and use exclusive circuit.

Power source with insufficient and improper work can cause electric shock and fire.

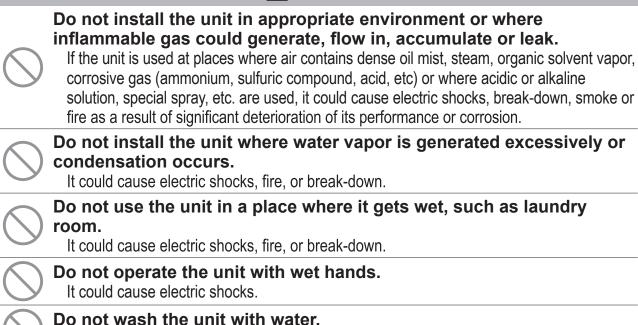

- Shut OFF the main power source before starting electrical work.
 Otherwise, it could result in electric shocks, break-down or malfunction.
- Do not modify the unit.

 It could cause electric shocks, fire, or break-down.
- Be sure to turn OFF the power circuit breaker before repairing/inspecting the unit.

 Repairing/inspecting the unit with the power circuit breaker turned ON could ca

Repairing/inspecting the unit with the power circuit breaker turned ON could cause electric shocks or injury.

MARNING

Improper connections or fixing could cause heat generation, fire, etc.

If dew, water, insect, etc. enters through the hole, it could cause electric shocks, fire or break-down.

If dew or water enters the unit, it may cause screen display anomalies.

When installing the unit at a hospital, telecommunication facility, etc., take measures to suppress electric noises.

It could cause malfunction or break-down due to hazardous effects on the inverter, private power generator, high frequency medical equipment, radio communication equipment, etc.

The influences transmitted from the remote control to medical or communication equipment could disrupt medical activities, video broadcasting or cause noise interference.

Do not leave the remote control with its upper case removed.

If dew, water, insect, etc. enters through the hole, it could cause electric shocks, fire or break-down.

ACAUTION

Do not install the remote control at following places.

- (1) It could cause break-down or deformation of remote control.
 - Where it is exposed to direct sunlight
 - Where the ambient temperature becomes 0 °C or below, or 40 °C or above
 - Where the surface is not flat
 - · Where the strength of installation area is insufficient
- (2) Moisture may be attached to internal parts of the remote control, resulting in a display failure.
 - Place with high humidity where condensation occurs on the remote control
 - Where the remote control gets wet
- (3) Accurate room temperature may not be detected using the temperature sensor of the remote control.
 - · Where the average room temperature cannot be detected
 - Place near the equipment to generate heat
 - Place affected by outside air in opening/closing the door
 - Place exposed to direct sunlight or wind from air-conditioner
 - Where the difference between wall and room temperature is large

To connect to a personal computer via USB, use the dedicated software.

Do not connect other USB devices and the remote control at the same time.

It could cause malfunction or break-down of the remote control/personal computer.

2. Accessories & Prepare on site

Following parts are provided.

Accessories R/C main unit, wood screw (ø3.5 x 16) 2 pcs, Quick reference

Following parts are arranged at site. Prepare them according to the respective installation procedures.

Item name	Q'ty	Remark
Switch box For 1 piece or 2 pieces (JIS C 8340 or equivalent)	1	
Thin wall steel pipe for electric appliance directly on a wall. (JIS C 8305 or equivalent)	As required	These are not required when installing directly on a wall.
Lock nut, bushing (JIS C 8330 or equivalent)	As required	
Lacing (JIS C 8425 or equivalent)	As required	Necessary to run R/C cable on the wall.
Putty	Suitably	For sealing gaps
Molly anchor	As required	
R/C cable (0.3 mm ² x 2 pcs)	As required	See right table when longer than 100 m

When the cable length is longer than 100 m, the max size for wires used in the R/C case is $0.5 \ \text{mm}^2$. Connect them to wires of larger size near the outside of R/C. When wires are connected, take measures to prevent water, etc. from entering inside.

≦ 200 m	0.5 mm ² x 2 cores
≦ 300m	0.75 mm ² x 2 cores
≦ 400m	1.25 mm ² x 2 cores
≦ 600m	2.0 mm ² x 2 cores

3. Installation place

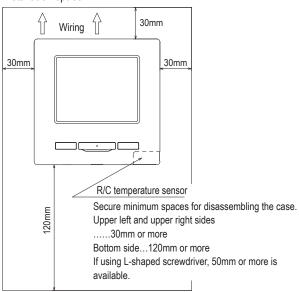

Secure the installation space shown in the figure.

For the installation method, "embedding wiring" or "exposing wiring" can be selected.

For the wiring direction, "Backward", "Upper center" or "Upper left" can be selected.

Determine the installation place in consideration of the installation method and wiring direction.

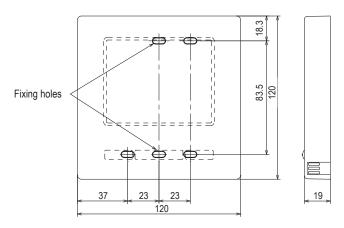

Installation space

4. Installation procedure

Perform installation and wiring work for the remote control according to the following procedure.

Dimensions (Viewed from front)

To disassemble the R/C case into the upper and lower pieces after assembling them once

 \cdot Insert the tip of flat head screwdriver or the like in the recess at the lower part of R/C and twist it lightly to remove. It is recommended that the tip of the screwdriver be wrapped with tape to avoid damaging the case.

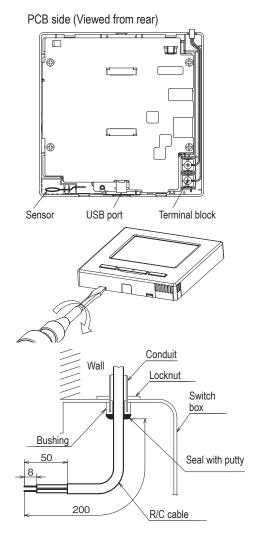

Take care to protect the removed upper case from moisture or dust.

In case of embedding wiring

(When the wiring is retrieved "Backward")

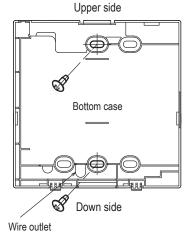

1) Embed the switch box and the R/C wires beforehand.

Seal the inlet hole for the R/C wiring with putty.

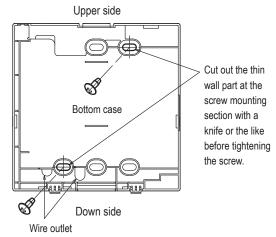

② When wires are passed through the bottom case, fix the bottom case at 2 places on the switch box.

Switch box for 1 pcs

Switch box for 2 pcs

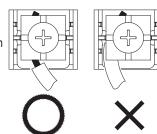

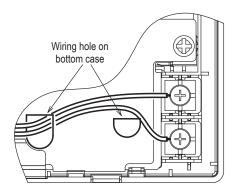

- ③ Connect wires from X and Y terminals of R/C to X and Y terminals of indoor unit. R/C wires (X, Y) have no polarity. Fix wires such that the wires will run around the terminal screws on the top case of R/C.
- 4 Install the upper case with care not to pinch wires of R/C.

Cautions for wire connection

Use wires of no larger than 0.5 mm² for wiring running through the remote control case. Take care not to pinch the sheath.

Tighten by hand $(0.7\ N\cdot m\ or\ less)$ the wire connection. If the wire is connected using an electric driver, it may cause failure or deformation.

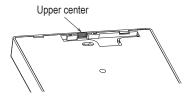

In case of exposing wiring

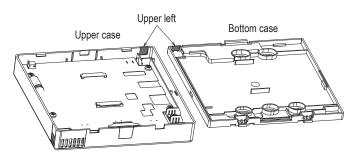

(When the wiring is taken out from the "upper center" or "upper left" of R/C)

1) Cut out the thin wall sections on the cases for the size of wire.

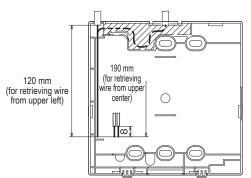

When taking the wiring out from the upper center, open a hole before separating the upper and bottom cases. This will reduce risk of damaging the PCB and facilitate subsequent work.

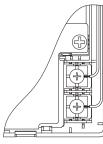

When taking the wiring out from the upper left, take care not to damage the PCB and not to leave any chips of cut thin wall inside.

- ② Fix the bottom R/C case on a flat surface with two wood screws.
- ③ In case of the upper center, pass the wiring behind the bottom case. (Hatched section)
- 4 Connect wires from X and Y terminals of R/C to X and Y terminals of indoor unit. R/C wires (X, Y) have no polarity. Fix wires such that the wires will run around the terminal screws on the top case of R/C.
- ⑤ Install the top case with care not to pinch wires of R/C.
- 6 Seal the area cut in 1 with putty.

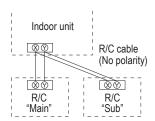

5. Main/Sub setting when more than one remote control are used

Up to two units of R/C can be used at the maximum for 1 indoor unit or 1 group.

One is main R/C and the other is sub R/C.

Operating range is different depending on the main or sub R/C.

R/C operation	Main	Sub

Advice: Connection to personal computer

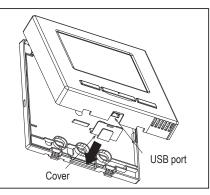

It can be set from a personal computer via the USB port (mini-B).

Connect after removing the cover for USB port of upper case.

Replace the cover after use.

Special software is necessary for the connection.

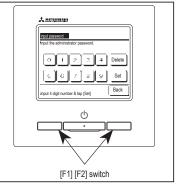

For details, view the web site.

Advice: Initializing of password

Administrator password (for daily setting items) and service password (for installation, test run and maintenance) are used.

- The administrator password at factory default is "0000". This setting can be changed (Refer to User's Manual).
- If the administrator password is forgotten, it can be initialized by holding down the [F1] and [F2] switches together for five seconds on the administrator password input screen.
- Service password is "9999", which cannot be changed.
 When the administrator password is input, the service password is also accepted.

Advice

When connecting two or more FDT/FDTC to one R/C, unify the panel type either to a panel with anti draft function or a standard panel.

(b) Model RC-E5 PJA012D730 🛦

Read together with indoor unit's installation manual.

∆WARNING

Fasten the wiring to the terminal securely and hold the cable securely so as not to apply unexpected stress on the terminal.

Loose connection or hold will cause abnormal heat generation or fire.

Make sure the power source is turned off when electric wiring work.
 Otherwise, electric shock, malfunction and improper running may occur.

ACAUTION

- Do not install the remote control at the following places in order to avoid malfunction.
 - (1) Places exposed to direct sunlight (4) Ho
 - (4) Hot surface or cold surface enough to generate condensation (5) Places exposed to oil mist or steam directly
 - (2) Places near heat devices(3) High humidity places
- (6) Uneven surface

Do not leave the remote control without the upper case.

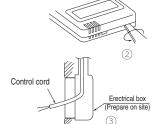

In case the upper cace needs to be detached, protect the remote control with a packaging box or bag in order to keep it away from water and dust.

Accessories	Remote control, wood screw (ø3.5×16) 2 pieces	
Prepare on site	Remote control cord (2 cores) the insulation thickness in 1mm or more.	
	[In case of embedding cord] Erectrical box, M4 screw (2 pieces)	
	[In case of exposing cord] Cord clamp (if needed)	

Installation procedure

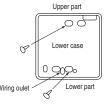

- Open the cover of remote control, and remove the screw under the buttons without fail.
- ② Remove the upper case of remote control. Insert a flat-blade screwdriver into the dented part of the upper part of the remote control, and wrench slightly.

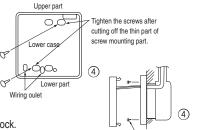

[In case of embedding cord]

3 Embed the erectrical box and remote control cord beforehand.

Prepare two M4 screws (recommended length is 12-16mm) on site, and install the lower case to erectrical box. Choose either of the following two positions in fixing it with screws.

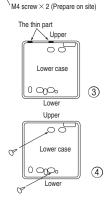

- S Connect the remote control cord to the terminal block. Connect the terminal of remote control (X,Y) with the terminal of indoor unit (X,Y). (X and Y are no polarity)
- Install the upper case as before so as not to catch up the remote control cord, and tighten with the screws.

[In case of exposing cord]

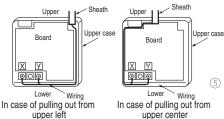

- You can pull out the remote control cord from left upper part or center upper part. Cut off the upper thin part of remote control lower case with a nipper or knife, and grind burrs with a file etc.
- ④ Install the lower case to the flat wall with attached two wooden screws.

S Connect the remote control cord to the terminal block.

Connect the terminal of remote control (X,Y) with the terminal of indoor unit (X,Y). (X and Y are no polarity)

Wiring route is as shown in the right diagram depending on the pulling out direction.

The wiring inside the remote control case should be within 0.3mm² (recommended) to 0.5mm².

The sheath should be peeled off inside the remote control case.

The peeling-off length of each wire is as below.

Pulling out from upper left	Pulling out from upper center
X wiring: 215mm	X wiring : 170mm
Y wiring: 195mm	Y wiring: 190mm

- Install the upper case as before so as not to catch up the remote control cord, and tighten with the screws.
- In case of exposing cord, fix the cord on the wall with cord clamp so as not to slack.

Installation and wiring of remote control

- Wiring of remote control should use 0.3mm² × 2 core wires or cables. (on-site configuration)
- 2 Maximum prolongation of remote control wiring is 600 m.

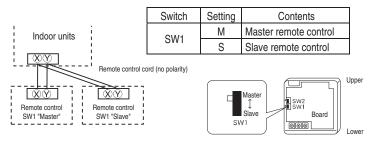

If the prolongation is over 100m, change to the size below.

But, wiring in the remote control case should be under 0.5mm². Change the wire size outside of the case according to wire connecting. Waterproof treatment is necessary at the wire connecting section. Be careful about contact failure.

100 - 200m	$\cdots 0.5$ mm ² \times 2 cores
Under 300m	0.75mm ² × 2 cores
Under 400m	1.25mm ² × 2 cores
Under 600m	2.0mm ² × 2 cores

Master/ slave setting when more than one remote controls are used

A maximum of two remote controls can be connected to one indoor unit (or one group of indoor units.)

Set SW1 to "Slave" for the slave remote control. It was factory set to "Master" for shipment.

Note: The setting "Remote control sensor enabled" is only selectable with the master remote control in the position where you want to check room temperature.

The air-conditioner operation follows the last operation of the remote control regardless of the master/ slave setting of it.

The indication when power source is supplied

When power source is turned on, the following is displayed on the remote control until the communication between the remote control and indoor unit settled.

At the same time, a mark or a number will be displayed for two seconds first.

This is the software's administration number of the remote control, not an error cord.

When remote control cannot communicate with the indoor unit for half an hour, the below indication will appear.

Check wiring of the indoor unit and the outdoor unit etc.

The range of temperature setting

When shipped, the range of set temperature differs depending on the operation mode as below.

Heating: 16-30°C (55-86°F)

Except heating (cooling, fan, dry, automatic): 18-30°C (62-86°F)

Upper limit and lower limit of set temperature can be changed with remote control.

Upper limit setting: valid during heating operation. Possible to set in the range of 20 to 30°C (68 to 86°F).

Lower limit setting: valid except heating (automatic, cooling, fan, dry) Possible to set in the range of 18 to 26°C (62 to 79°F).

When you set upper and lower limit by this function, control as below.

 When ②TEMP RANGE SET, remote control function of function setting mode is "INDN CHANGE" (factory setting), [If upper limit value is set]

During heating, you cannot set the value exceeding the upper limit.

[If lower limit value is set]

During operation mode except heating, you cannot set the value below the lower limit.

2. When ② TEMP RANGE SET, remote control function of function setting mode is "NO INDN CHANGE" [If upper limit value is set]

During heating, even if the value exceeding the upper limit is set, upper limit value will be sent to the indoor unit. But, the indication is the same as the temperature set.

[If lower limit value is set]

During except heating, even if the value lower than the lower limit is set, lower limit value will be sent to the indoor unit. But, the indication is the same as the temperature set.

How to set upper and lower limit value

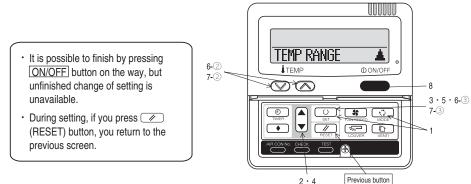

1. Stop the air-conditioner, and press (SET) and (MODE) button at the same time for over three seconds.

The indication changes to "FUNCTION SET ▼".

- 2. Press ▼ button once, and change to the "TEMP RANGE ▲ " indication.
- 3. Press (SET) button, and enter the temperature range setting mode.
- 4. Select "UPPER LIMIT ▼" or "LOWER LIMIT ▲" by using ▲ | ▼ button.
- 5. Press O (SET) button to fix.
- 6. When "UPPER LIMIT ▼" is selected (valid during heating)
 - ① Indication: " $\bigcirc \lor \land \mathsf{SETUP}" \to \mathsf{"UPPER\ 30°C} \lor \mathsf{"}$
 - ② Select the upper limit value with temperature setting button \(\subseteq \in\). Indication example: "UPPER 26°C \(\select \)" (blinking)
 - ③ Press (SET) button to fix. Indication example: "UPPER 26°C" (Displayed for two seconds)

 After the fixed upper limit value displayed for two seconds, the indication will return to "UPPER LIMIT ▼".
- 7. When "LOWER LIMIT **\(\Lambda \)**" is selected (valid during cooling, dry, fan, automatic)
 - ① Indication: " $^{\bullet}$ \vee \wedge SET UP" \rightarrow "LOWER 18°C \wedge "
 - ② Select the lower limit value with temperature setting button ☑ △. Indication example: "LOWER 24°C ∨ ∧" (blinking)
 - ③ Press (SET) button to fix. Indication for example: "LOWER 24°C" (Displayed for two seconds)

 After the fixed lower limit value displayed for two seconds, the indication will return to "LOWER LIMIT ▼".
- 8. Press ON/OFF button to finish.

The functional setting

The initial function setting for typical using is performed automatically by the indoor unit connected, when remote control and indoor unit are connected.

As long as they are used in a typical manner, there will be no need to change the initial settings.

If you would like to change the initial setting marked " O ", set your desired setting as for the selected item. The procedure of functional setting is shown as the following diagram.

Flow of function setting

: Stop air-conditioner and press " " (SET) and
" " " (MODE) buttons at the same time for over three seconds.
: Press " " (SET) button.
: Press | To button. Start Finalize Reset

Record and keep the setting

Consult the technical data etc. for each control details

It is possible to finish above setting on the way, and unfinished change of setting is unavailable.

Remote control	MODEL TYPE	HEAT PUMP	Heat pump unit
function15		COOLING ONLY	Exclusive cooling unit

Note 3: As for plural indoor unit, set indoor functions to each master and slave indoor unit.

But only master indoor unit is received the setting change of indoor unit function "05 EXTERNAL INPUT" and "06 PERMISSION / PROHIBISHION".

How to set function

Stop air-conditioner and press (SET) (MODE) buttons at the same time for over three seconds, and the "FUNCTION SET ▼ " will be displayed.

- 2. Press (SET) button.
- Make sure which do you want to set, "■ FUNCTION ▼" (remote control function) or "I/U FUNCTION ▲" (indoor unit function).

Press \triangle or $\overline{\ \ }$ button. Selecct * FUNCTION $\overline{\ \ \ }$ " (remote control function) or "I/U FUNCTION \triangle " (indoor unit function).

5. Press (SET) button.

6. 【On the occasion of remote control function selection】

① "DATA LOADING" (Indication with blinking) Display is changed to "01 6 MA ESP SET".

② Press ▲ or ▼ button.

"No. and function"are indicated by turns on the remote control function table, then you can select from them. (For example)

③ Press () (SET) button

The current setting of selected function is indicated. (for example) "AUTO RUN ON" ← If "02 AUTO RUN SET" is selected

④ Press ▲ or ▼ button. Select the setting.

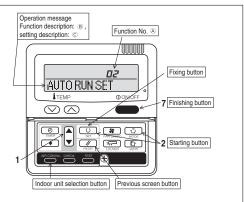

⑤ Press ◯ (SET)

"SET COMPLETE" will be indicated, and the setting will be completed.

Then after "No. and function" indication returns, Set as the same procedure if you want to set continuously ,and if to finish, go to 7.

7. Press ON/OFF button. Setting is finished.

[On the occasion of indoor unit function selection]

① "DATA LOADING" (Blinking for 2 to 23 seconds to read the data) Indication is changed to "02 FAN SPEED SET". Go to ②.

[Note]

(1) If plural indoor units are connected to a remote control, the indication is "I/U 000" (blinking) ← The lowest number of the indoor unit connected is indicated.

(2) Press ▲ or ▼ button.

Select the number of the indoor unit you are to set.

If you select "ALL UNIT ▼", you can set the same setting with

- (3) Press (SET) button.
- ② Press ▲ or ▼ button.

"No. and function" are indicated by turns on the indoor unit function table, then you can select from them (For example)

③ Press O (SET) button.
The current setting of selected function is indicated.

(For example) "STANDARD" ← If "02 FAN SPEED SET" is selected

- ④ Press ▲ or ▼ button. Select the setting.
- Press (SET) button.
 "SET COMPLETE" will be indicated, and the setting will be completed.

Then after "No. and function" indication returns, set as the same procedure if you want to set continuously , and if to finish, go to 7.

* When plural indoor units are connected to a remote control, press the AIR CON No. button, which allows you to go back to the indoor unit selection screen. (example "I/U 000 \(\textstyle{\textstyle{A}} ")")

- It is possible to finish by pressing ON/OFF button on the way, but unfinished change of setting is
- During setting, if you press (RESET) button, you return to the previous screen.
- · Setting is memorized in the control and it is saved independently of power failure.

[How to check the current setting]

When you select from "No. and funcion" and press set button by the previous operation, the "Setting" displayed first is the current

(But, if you select "ALL UNIT ▼ ", the setting of the lowest number indoor unit is displayed.)

(c) Operation and setting from wired remote control

	Change administrator password	The administrator password can be changed. (Default setting is "0000") The administrator password can be reset.	0	-
	F1/F2 function setting	Functions can be set for F1 and F2. Selectable functions: [High power operation], [Energy-saving operation], [Silent mode cont.], [Home leave mode], [Favorite set 1], [Favorite set 2] and [Filter sign reset].	0	_
ervice setting	T . H .: 1 .			
Installer settings [Service password]	Installation date	The [Installation date] can be registed. When registering the [Instaration date], the [Next service date] is displayed automatically. (For changing the [Next service date], please refer the item of [Service & Maintenance])	0	_
	Company information	The [Company information] can be registed and can be displayed on the R/C. • The [Company] can be registered within 26 characters. • The [Phone No.] can be registed within 13 digits.	0	_
	Test run	On/Off operation of the test run can be done.		
	Cooling test run Drain pump test run	The [Cooling test run] can be done at 5°C of set temp. for 30 minutes. Only drain pump can be operated.	0	С
	Static pressure adjustment	In case of combination with only the ducted indoor unit which has a function of static pressure adjustment, the static pressure is adjustable.		_
	Change auto-address	 It can be set for each indoor unit individually. The set address of each indoor unit decided by auto-address setting method can be changed to any other address. 		-
	Address setting of main IU	Main indoor unit address can be set. Only the Main indoor unit can change operation mode and the Sub indoor units dominated by the Main indoor shall follow. The Main indoor unit can domain 10 indoor units at a maximum.		-
	IU back-up function	When a pair of indoor units (2 groups) is connected to one unit of remote control, it can be set Enable or Disable for the [IU rotation], [IU capacity back-up] and [IU fault back-up]	0	-
	Infrared sensor setting (Motion sensor setting) When the panel with the infrared sensor (motion sensor) is assembled.	Set Enable or Disable for the infrared sensor detectors of indoor units connected to the remote control. If Disable is selected, it cannot be control the infrared sensor control for the energy-saving setting.	0	_
	Grill lifting operation	Set enable for automatic lifting panel operation. When automatic lifting panel is assembled.		
R/C function setting	Main/Sub R/C	The R/C setting of [Main/Sub] can be changed.	0	_
[Service password]	Return air temp.	When two or more indoor units are connected to one unit of remote control, suction sensors, which are used for the judgement by thermostat, can be selected. • It can be selected from [Individual], [Master IU] and [Average temp].	0	-
	R/C sensor	It can be set the mode to switch to the remote control sensor. It can be selected from cooling and heating.	0	
	R/C sensor adjustment Operation mode	The offset value of [R/C sensor] sensing temp. can be set respectively in heating and cooling. Enable or Disable can be set for each operation mode.	0	
	°C / °F	Set the unit for setting temperatures. • °C or °F can be selected.	0	
	Fan speed	Fan speeds can be selected.	0	
	External input Upper/lower flap control	When two or more indoor units are connected to one unit of remote control, the range to apply CnT inputs can be set. [Stop at fixed position] or [Stop at any position] can be selected for the upper and lower louvers.	0	
	Left/right flap control	[Fixed position stop] or [Stop at any position] can be selected for the right and left louvers.	ŏ	-
	Ventilation setting	Combination control for ventilator can be set.	0	
	Auto-restart Auto temp. setting	The operation control method after recovery of power failure happened during operation can be set. [Enable] or [Disable] of [Auto temp. setting] can be selected.	0	-
	Auto fan speed	[Enable] or [Disable] of [Auto fam speed] can be selected.	Ö	_
IU settings	Fan speed setting	The fan speed for indoor units can be set. The setting of filter sign display timer can be done from following patterns.		_
[Service password]	Filter sign External input 1	The connect of control by external input 1 can be changed.	Δ	
	External input 1 signal	The type of external input 1 signal can be changed.	0	
	External input 2	The connect of control by external input 2 can be changed. The type of external input 2 signal can be changed.		-
	External input 2 signal Heating thermo-OFF temp, adjustment	The judgement temp. of heating themo-off can be adjusted within the range from 0 to +3°C (1°C interval).		-
	Return temperature adjustment	The sensing temp. of return air temp. sensor built in the indoor unit can be adjusted within the range of $\pm 2^{\circ}$ C.		
	Fan control in cooling thermo-OFF Fan control in heating thermo-OFF	Fan control, when the cooling thermostat is turned OFF, can be changed. Fan control, when the heating thermostat is turned OFF, can be changed.	^	<u> </u>
	Anti-frost temp.	Fan control, when the heating thermostat is turned OFF, can be changed. Judgment temperature for the anti-frost control during cooling can be changed.	Δ	
	Anti-frost control	When the anti-frost control of indoor unit in cooling is activated, the fan speed can be changed.		
	Drain pump operation Keep fan operating after cooling is stopped	In any operation mode in addition to cooling and dry mode, the setting of drain pump operation can be done. The time period residual fan operation after stopping or thermo-off in cooling mode can be set.		
	Keep fan operating after heating is stopped	The time period residual fan operation after stopping or thermo-off in heating mode can be set. The fan expertises rule following the residual fan expertises of the temping or thermo-off in heating mode can be set.		
	Fan circulator operation Control pressure adjust	The fan operation rule following the residual fan operation after stopping or themo-off in heating mode can be set. In case that the fan is operated as the circulator, the fan control rule can be set. When only the OA processing units are operated, control pressure value can be changed.		
	Auto operation mode Thermo. rule setting	The [Auto rule selection] for switching the operation mode automatically can be selected from 3 patterns. When selecting [Outdoor air temp. control], the judgment temp can be offset by outdoor temp		
	Auto fan speed control IU overload alarm	Auto switching range for the auto fan speed control can be set. If the difference between the setting temperature and the suction temperature becomes larger than the temperature difference	_	
		set for the overload alarm, at 30 minutes after the start of operation, the overload alarm signal is transmitted from the external	0

Accessories included in package

Be sure to check all the accessories included in package

No.	Part name	Quantity
1	Indoor unit's connection cable (cable length: 1.8m)	1
2	Wood screws (for mounting the interface: ø4x 25)	2
3	Tapping screws (for the cable clump and the interface mounting bracket)	3
4	Interface mounting bracket	1
(5)	Cable clamp (for the indoor unit's connection cable)	1
6*	CnT terminal connection cable (total cable length: 0.5m)	1

Safety precautions

Before use, please read these Safety precautions thoroughly before installation.

 All the cautionary items mentioned below are important safety related items to be taken into consideration, so be sure to observe them at all times.

⚠Warning

Incorrect installation could lead to serious consequences such as death, major injury or environmental destruction.

Symbols used in these precautions

Always go along these instruction.

After completed installation, carry out trial operation to confirm no anomaly, and ask the user to keep this installation manual in a good place for future reference.

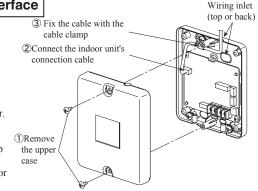

- ●Installation must be carried out by a qualified installer.
- If you install it by yourself, it may cause an electric shock, fire and personal injury, as a result of a system malfunction.
- Install it in full accordance with the instruction manual.
- Incorrect installation may cause an electric shock, fire and personal injury.
- Electrical work must be carried out by a qualified electrician in accordance with the technical standard for electrical equipment, the indoor wiring standard and this instruction manual.
 Incorrect installation may cause an electric shock, fire and personal injury.
- Use the specific cables for wiring. And connect all the cables to terminals or connectors securely and clamp them with cable clamps in order for external forces not to be transmitted to the terminals directly.

 Incomplete connection may cause malfunction, and lead to heat generation and fire.
- Use the original accessories and specified components for installation.
- If the parts other than those prescribed by us are used, it may cause an electric shock, fire and personal injury.

Connecting the indoor unit's connection cable to the interface

- ①Remove the upper case of the interface.
- Remove 2 screws from the interface casing before removal of upper casing.
- ②Connect the indoor unit's connection cable to the interface.
 - Connect the connector of the indoor unit connection cable to the connector on the interface's circuit board.
- 3Fix the indoor unit's connection cable with the cable clamp.
 - Cable can be brought in from the top or from the back.
- Cut out the punch-outs for the connection cables running into the casing with cutter.
- (4) Connect the indoor unit's connection cable to the indoor control PCB.
- · Connect the indoor unit's connection cable to the indoor control PCB securely
- Clamp the connection cable to the indoor control box securely with the cable clamp provided as an accessory.
- Regarding the cable connection to the indoor unit, refer to the instruction manual for indoor unit

Name of each part of the interface

*Either the connection cables of Superlink E board (SC-ADNA-E) or of wired remote control is connectable.

Switch	Setting	Function	Switch	Setting	Function
SW2-1	ON**	CnT level input	SW2-3	ON**	External input (CnT input)

*** Indoor fan control at low outdoor air temperature in cooling

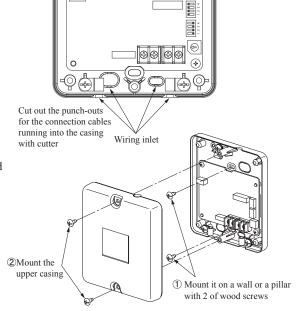

Wiring inlet

Installation of the interface

- Install the interface within the range of the connection cable length from the indoor unit. (approximately 1.8m)
- Be sure not to extend the connection cable on site. If the connection cable is extended, malfunction may occur.
- Fix the interface on the wall, pillar or the like.
- Do not install the interface and wired remote control at the following places.
 - OPlaces exposed to direct sunlight
 - OPlaces near heating devices
- OHigh humidity places
- OSurfaces where are enough hot or cold to generate condensation
- OPlaces exposed to oil mist or steam directly
- OUneven surface

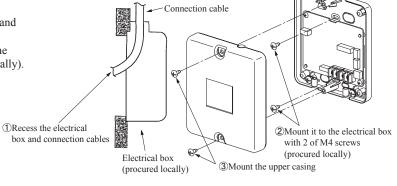

Mounting the interface directly on a wall

- ①Mount the lower casing of the interface on a flat surface with wood screws provided as standard accessory.
- 2 Mount the upper casing.

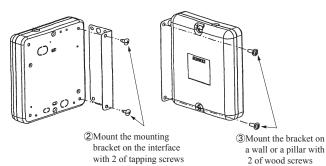

Recessing the interface in the wall

- ①Recess the electrical box (procured locally) and connection cables in the wall.
- ②Mount the lower casing of the interface to the electrical box with M4 screws (procured locally).
- 3 Mount the upper casing.

Mounting the interface with the mounting bracket

- ①Mount the mounting bracket to the interface with tapping screws provided as standard accessory.
- ②Mount the mounting bracket on wall or the like with wood screws provided as standard accessory.
- 3 Mount the mounting bracket to a wall surface, etc. using the wood screws provided.

Installation check items

- ☐ Are the connection cables connected securely to the terminal blocks and connectors?
- ☐ Are the thickness and length of the connection cables conformed with the standard?

Connection of Superlink E board

Regarding the connection of Superlink E board, refer to the instruction manual of Superlink E board. For electrical work, power source for all of units in the Superlink system

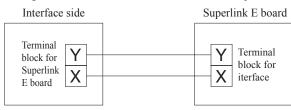

must be turned OFF.

①Switch ON the DIP switch SW2-2 (Factory setting: ON) on the interface PCB.

Caution:Wireless remote control attached to the indoor unit can be used in parallel, after connecting the wired remote control. However, some of functions other than the basic functions such as RUN/STOP, Temperature Setting, etc. may not work properly and may have a mismatch between the display and the actual behavior.

②Wiring connection between the interface and the Superlink E board.

Connection of wired remote control

Regarding the connection of wired remote control, refer to the instruction manual of wired remote control.

①Switch ON the DIP switch SW2-2 (Factory setting : ON) on the interface PCB.

Caution: Wireless remote control attached to the indoor unit can be used in parallel, after connecting the wired remote control. However, some of functions other than the basic functions such as RUN/STOP, Temperature Setting, etc. may not work properly and may have a mismatch between the display and the actual behavior.

2 Wiring connection between the interface and the wired remote control.

Installation and wiring of wired remote control

- (A) Install the wired remote control with reference to the attached instruction manual of wired remote control.
- ⊕ 0.3mm² x 2 cores cable should be used for the wiring of wired remote control.
- © Maximum length of wiring is 600m.

If the length of wiring exceeds 100m, change the size of cable as mentioned below.

100m-200m: $0.5mm^2 \times 2$ cores, 300m or less: $0.75mm^2 \times 2$ cores, 400m or less: $1.25mm^2 \times 2$ cores, 600m or less: $2.0mm^2 \times 2$ cores However, cable size connecting to the terminal of wired remote control should not exceed $0.5mm^2$. Accordingly if the size of connection cable exceeds $0.5mm^2$, be sure to downsize it to $0.5mm^2$ at the nearest section of the wired remote control and waterproof treatment should be done at the connecting section in order to avoid contact failure.

- Don't use the multi-core cable to avoid malfunction.
- Except he wiring of wired remote control away from grounding (Don't touch it to any metal frame of building, etc.).
- © Connect the connection cables to the terminal blocks of the wired remote control and the interface securely (no polarity).
- 3Clamp the connection cables with cable clamps.

Control of multiple units by a single wired remote control

Multiple units (up to 16) can be controlled by a single wired remote control. In this case, all units connected with a single wired remote control will operate under the same mode and same setting temperature.

- ①Connect all the interface with 2 cores cables of wired remote control line.
- ②Set the address of indoor unit for remote control communication from "0" to "F" with the rotary switch SW1 on the interface PCB.
- 3 After turning the power ON, the address of indoor unit can be displayed by pressing AIR CON No. button on the wired remote control.
 - Make sure all indoor units connected are displayed in order by pressing \blacksquare or \blacksquare button.

Master/Slave setting wired when 2 of wired remote control are used

Maximum two wired remote control can be connected to one indoor unit (or one group of indoor units)

①Set the DIP switch SW1 on the wired remote control to "Slave" for the slave remote control. (Factory setting: Master)

O Caution: Remote control sensor is invalid.

• When using the wireless remote control in parallel with the wired remote control;

Since temperature setting range of wired remote control is different from that of wireless remote control, please adjust the setting range of wired remote control to be the same setting range of wireless remote control by following procedure. (The set temperature may not be displayed correctly on the wireless remote control, unless change of temperature setting range is done.)

Changing procedure of temperature setting range is as follows.

How to set upper and lower limit of temperature setting range

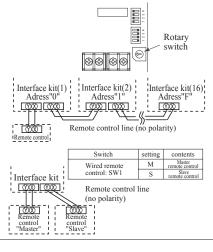

- 1. Stop the air-conditioner, and press (SET) and (MODE) button at the same time for 3 seconds or more.
 - The indication changes to "FUNCTION SET ▼"
- 2. Press ▼button once, and change to the "TEMP RANGE ▲" indication.
- 3. Press (SET) button, and enter the temperature range setting mode.
- Confirm that the "Upper limit ▼" is shown on the display.
- 5. Press (SET)button to fix.
- 6. ①Indication: "ⓑ∨∧SET UP"→"UPPER 28°C ∨∧"
 - ②Select the upper limit value 30°C with temperature setting button \square . "UPPER 30°C \vee " (blinking)
 - ③Press (SET) button to fix. "UPPER 30°C" (Displayed for two seconds)

 After the fixed upper limit value displayed for two seconds, the indication will returm to "UPPER LIMIT ▼".
- Press Dutton once, "LOWER LIMIT ▲" is selected, press O(SET) button to fix.
 ①Indication: "♣∨ ∧ SET UP" → "LOWER 20°C ∨ ∧"
 - ②Select the lower limit value 18°C with temperature setting button ☑."LOWER 18°C ∧" (blinking)
 - ③Press (SET) button to fix. "LOWER 18°C" (Displayed for two seconds)

 After the fixed lower limit value displayed for two seconds, the indication will returm to "LOWER LIMIT▼"
- 8. Press ON/OFF button to finish.

Temperature setting range

Mode	Temperature setting range
Cooling, Heating, Dry, Auto	18-30°C

- It is possible to quit in the middle by pressing ON/OFF button, but the change of setting is incompleted.
- During setting, if pressing (RESET) button, it returns to the previous screen.

(b) SC-BIKN2-E RKZ012A099

* When RC-EX3 or RC-EX3A is connected, please use SC-BIKN2-E by all means.

Accessories included in package

Be sure to check all the accessories included in package.

Connection of wired remote control

Regarding the connection of wired remote control, refer to the installation manual of wired remote control. ①Switch ON the DIP switch SW2-2 (Factory setting: ON) on the interface PCB.

Caution: Wireless remote control attached to the indoor unit can be used in parallel, after connecting the wired remote control. However, some of functions other than the basic functions such as RUN/STOP, temperature setting, etc. may not work properly and may have a mismatch between the display and the actual behavior.

②Wiring connection between the interface and the wired remote control.

Installation and wiring of wired remote control

(A) Install the wired remote control with reference to the attached installation manual of wired remote control.

- (B) 0.3mm² x 2 cores cable should be used for the wiring of wired remote control.
- © Maximum length of wiring is 600m.

If the length of wiring exceeds 100m, change the size of cable as mentioned below.

100m-200m: 0.5mm² × 2 cores, 300m or less: 0.75mm² × 2 cores, 400m or less: 1.25mm² × 2 cores, 600m or less: 2.0mm² × 2 cores However, cable size connecting to the terminal of wired remote control should not exceed 0.5mm². Accordingly if the size of connection cable exceeds 0.5mm², be sure to downsize it to 0.5mm² at the nearest section of the wired remote control and waterproof treatment should be done at the connecting section in order to avoid contact failure.

- Don't use the multi-core cable to avoid malfunction.
- (E) Keep the wiring of wired remote control away from grounding (Don't touch it to any metal frame of building, etc.).
- © Connect the connection cables to the terminal blocks of the wired remote control and the interface securely (no polarity).
- 3Clamp the connection cables with cable clamps.

Control of multiple units by a single wired remote control

Multiple units (up to 16) can be controlled by a single wired remote control. In this case, all units connected with a single wired remote control will operate under the same mode and same setting temperature.

- ①Connect all the interface with 2 cores cables of wired remote control line.
- ②Set the address of indoor unit for remote control communication from "0" to "F" with the rotary switch SW1 on the interface PCB.
- 3 After turning the power ON, the address of indoor unit can be displayed by pressing AIR CON No. button on the wired remote control. Make sure all indoor units connected are displayed in order by pressing or
 button.

Master/Slave setting wired when 2 of wired remote control are used

Maximum two wired remote control can be connected to one indoor unit (or one group of indoor units)

①Set the DIP switch SW1 on the wired remote control to "Slave" for the slave remote control. (Factory setting: Master)

O Caution: Remote control sensor of the slave remote control is invalid.

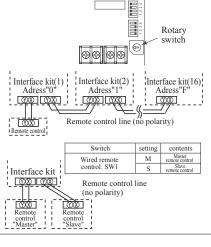

• When using the wireless remote control in parallel with the wired remote control; Since temperature setting range of wired remote control is different from that of wireless remote control, please adjust the setting range of wired remote control to be the same setting range of wireless remote control by following procedure. (The set temperature may not be displayed correctly on the wireless remote control, unless change of temperature setting range is done.) Changing procedure of temperature setting range is as follows

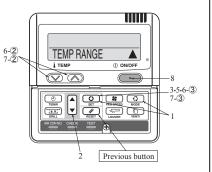

How to set upper and lower limit of temperature setting range

- Stop the air-conditioner, and press (SET) and (MODE) button at the same time for 3 seconds or more.
 - The indication changes to "FUNCTION SET▼"
- 2. Press ▼button once, and change to the "TEMP RANGE ▲" indication.
- Press (SET) button, and enter the temperature range setting mode.
- Confirm that the "Upper limit ▼" is shown on the display.
- Press (SET)button to fix.
- ①Indication: "ⓑ∨∧SET UP"→"UPPER 28°C ∨∧"
 - ②Select the upper limit value 30°C with temperature setting button \(\bar{\cap}\)."UPPER30°C∨" (blinking)
 - ③Press (SET) button to fix. "UPPER 30°C" (Displayed for two seconds) After the fixed upper limit value displayed for two seconds, the indication will returm to"UPPER LIMIT ▼"
- 7. Press ▼button once, "LOWER LIMIT ▲ " is selected, press ◯ (SET) button to fix. ①Indication: " $\bigcirc \lor \land SETUP" \rightarrow "LOWER 20°C \lor \land \lor$
 - ②Select the lower limit value 18°C with temperature setting button ☑."LOWER18°C∧"
 - ③Press (SET) button to fix. "LOWER 18°C" (Displayed for two seconds) After the fixed lower limit value displayed for two seconds, the indication will returm to"LOWER LIMIT
- 8. Press ON/OFF button to finish.

Temperature setting range

emperature setting range	
Mode	Temperature setting range
Cooling, Heating, Dry, Auto	18-30°C

- It is possible to quit in the middle by pressing ON/OFF button, but the change of setting is incompleted.
- During setting, if pressing (RESET) button, it returns to the previous screen

(3) Superlink E board (SC-ADNA-E)

- Read and understand the instructions completely before starting installation.
- Refer to the instructions for both indoor and outdoor units

Safety precautions

- Carefully read "Safety precautions" first. Follow the instructions for installation.
 Precautions are grouped into "Warning⚠" and "Caution⚠". The "Warning⚠" group includes items that may lead to serious injury or death if not observed. The items included in the "Caution⚠" group also may lead to serious results under certain conditions. Both groups are crucial for safety installation. Read and understand them carefully.
- After installation, conduct the test operation of the device to check for any abnormalities. Describe how to operate the device to the customer following the installation instruction manual. Instruct the customer to keep this installation instruction for future reference.

∆WARING

- This device should be installed by the dealer where you purchase the device or a licensed professional shop. If the device is incorrectly installed by the customer, it may result in electric shock or fire.
- Install the device carefully following the installation instruction. If the device is incorrectly installed, it may result in electric shock or fire.
- Use the accessory parts and specified parts for installation. If any parts that do not match the specifications are used, it may result in electric shock or fire.

 • A person with the electrical service certification should conduct the service
- based on the "Technical standards for electrical facilities", "Electrical Wiring Code", and the installation instruction. If the work is done incorrectly, it may result in electric shock or fire.
- Wiring should be securely connected using the specified types of wire. No external force on the wire should be applied to any terminals. If a secure connection is not achieved, it may result in electric shock or fire

1 Application

Indoor-to-outdoor three core communication specification type 3 (since October 2007)

Accessories

SL E board	Metal box	Metal cover	Screw for ground
	[0]	•	M4×8L 2 pieces
Pan head screws	Locking supports	Binding band	Grommet
ø4x8L 2 pieces	To secure the print board and the metal box Made of nylon 4 pieces	68	

3 Function

Allowing the center control SL1N-E, SL2N-E, and SL4-AE/BE to control and monitor the commercial air-conditioning unit

4 Control switching

Settings can be changed by the switch SW3 on the SLE board as in the following.

Switch	Symbol	Switch	Remarks		
		ON	Master		
	1	OFF (default)	Slave		
	ON		Fixed previous protocol		
	2	OFF (default)	Automatic adjustment of Superlink protocol		
SW3	3	ON	Indicates the forced operation stop when abnormality has occurred.		
	3	OFF (default)	Indicates the status of running/stop as it is, when abnormality has occurred.		
	4	ON	The hundredth address activated "1"		
	4	OFF (default)	The hundredth address activated "0"		

ACAUTION

- Provide ground connection.
- The ground line should never be connected to the gas supply piping, the water supply piping, the lightning conductor rod, nor the telephone ground. If the grounding is improper, it may result in electric shock.

 Do not install the device in the following locations.
- - 1. Where there is mist/spray of oil or steam such as kitchens.

 - Where there is corrosive gases such as sulfurous acid gas.
 Where there is a device generating electromagnetic waves.
 These may interfere with the control system resulting in the device becoming uncontrollable.
 - 4. Where flammable volatile materials such as paint thinner and gasoline may exist or where they are handled. This may cause a fire.

5 Connection outline

Note for setting the address

- Set the address between 00 and 47 for the previous Superlink connection and between 000 and 127 for the new Superlink connection. (*1)
- Do not set the address overlapping with those of the other devices in the network. (The default is 000)

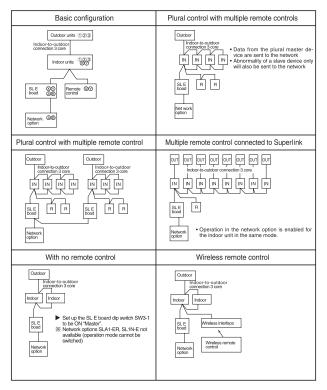

Whether the actual link is either the new Superlink or the previous Superlink depends on the models of the connected outdoor and indoor units. Consult the agent or the dealer.

Signal line specification

Communication method	Previous Superlink	New Superlink
Line type	MVVS	MVVS
Line diameter	0.75 - 1.25mm ²	0.75/1.25mm ²
Signal line (total length)	up to 1000m	up to 1500/1000m (*2)
Signal line (maximum length)	up to 1000m	up to 1000m

- (*2) Up to 1500 m for 0.75 mm^2 , and up to 1000 m for 1.25 mm^2 . Do not use 2.0 mm². It may cause an error.
- (*3) Connect grounding on both ends of the shielding wire. For the grounding method, refer to the section "6 Installation".

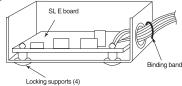

- Set the Superlink network address with SW1 (tens place), SW2 (ones place), and SW3 (hundreds place).
- (2) Set the SL E board SW3-1 to be ON (Master) when using this without any remote control (no wired remote control nor wireless remote control).
- (3) Set up the plural master/slave device using the dip switches on the indoor unit board.
- (4) Set up the remote control master/slave device using the slide switch on the remote control board.
- (5) Set up "0" to "F" using the address rotary switch on the indoor unit board when controlling the indoor unit with the multiple remote control.

6 Installation

- 1. When using the metal box (mounted on the indoor unit / mounted on the back of the remote control):
 - (1) Mount the SL E board in the metal box using the locking supports.
 - (2) Wiring should go through the provided grommet since then through the wiring to the hole on the Metal box.

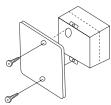

Secure the grommet after inserting the grommet into the Metal box as shown in below figure, then tie the wiring at the outlet of the unit using a binding band.

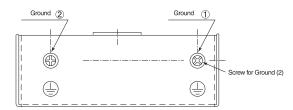

▲ When installed outside the indoor unit, put the metal cover on.

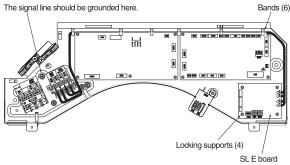

▲ When installed on the back of the remote control, mount it directly on the remote control bottom case.

Connect grounding. Connect grounding for the power line to Ground (1), and grounding for the signal line to Ground (2) or to the Ground on the indoor unit control box.

- When connecting to the indoor unit control box (ceiling-concealed type and FDT type only):
 - (1) Mount the SL E board in the control box using the locking supports.
 - (2) Remove 6 bands from the box and put the wiring through the bands to be secured.

Electrical shock hazard! Make sure to turn the power off for servicing. Be cautious so that no abnormal force should be applied to the wiring. Do not let the SL E board hung by the wiring. Do not damage the board with a screw driver.

The board is sensitive to static electricity. Release the static electricity of your body before servicing.

(you can do this by touching the control board which is grounded).

Location of installation

Install the device at the location where there are no electromagnetic waves nor where there is water and dust. The specified temperature range of the device is 0 to 40° C. Install the device at the location where the ambient temperature stays within the range. If it exceeds the specification, make sure to provide solution such as installing a cooling fan. When used outside of the range, it may cause abnormal operation.

7 Indicator display

Check the LED 3 (green) and LED 2 (red) on the SL E board for flashing.

SL E boa	ard LEDs		Display on the
Red	Green	Inspection mode	integrated network control device
Off	Flashing	Normal communication	
Off	Off	Disconnection in the remote control communication line (X or Y) Short-circuit in the remote control communication line (between X and Y) Faulty indoor unit remote control power Faulty remote control communication circuit Faulty CPU on SL E board	No corresponding unit number
One flash	Flashing	Disconnection in the Superlink signal line (A or B) Short-circuit in the Superlink signal line (between A and B) Faulty Superlink signal circuit	
Two flashes	Flashing	Faulty address setting for the SL E board (Set up the address for previous SL E board : more than 48 new SL E board : more than 128)	
Three flashes	Flashing	SL E board parent not set up when used without a remote control Faulty remote control communication circuit	E1
Four flashes	Flashing	Address overlapping for the SL E board and the Superlink network connected indoor unit	E2
Off	Flashing	Number of connected devices exceeds the specification for the multiple indoor unit control	E10
